

AT Command User Manual

For ZTE Corporation's MG815+ Modules

Version: 5.50

ZTE CORPORATION

This manual is applicable for MG615+/MG415 /MG815A modules.

Copyright Statement

No part of this publication may be excerpted, reproduced, translated or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm, without the prior written permission of ZTE Corporation.

is the registered trademark of ZTE Corporation. All other trademarks appeared in this manual are owned by the relevant companies.

ZTE Corporation reserves the right to make modifications on print errors or update specifications in this manual without prior notice.

ZTE Corporation keeps the right to make the final explanation to this manual. 。

With strong technical force, ZTE Corporation can provide CDMA/GPRS module customers with the following all-around technical support:

1. Provide complete technical documentation;
2. Provide the development board used for R&D, test, production, after-sales, etc.;
3. Provide evaluations and technical diagnosis for principle diagram, PCB, test scenarios;
4. Provide test environment;

ZTE Corporation provides customers with onsite supports, and also you could get supports through telephone, website, instant communication, E-mail, etc.

The module website module.ztemt.com.cn provides the relevant industry information and module technical documentation. The authorized module customers could download the latest technical documentation for our website. If you have more requirements, you could send an E-mail to module@zte.com.cn. You can also call us at 0755-86360280 for more supports.

Preface

Summary

This manual is applicable for MG815+, MG615+, MG415+ and MG815A modules.

Taking MG815+ for example, this manual describes the AT command interfaces of the modules and introduces AT commands for ZTE CDMA module series, which contains standard CDMA voice and data applications. According to CDMA standard, some specific ZTE commands are added for users' convenience.

This manual might help you to understand how to use AT commands of these modules.

Target Readers

- System designing engineers
- Hardware engineers
- Software engineers
- Testing engineers

Brief Introduction

Chapter	Contents
1. General Description	Introduces CDMA background knowledge and AT command type and syntax.
2. AT Commands	Particularly introduces AT commands relating to MG815+ modules.
3. Applications & Precautions	Application cases and precautions of MG815+ modules.

Update History

Document Version: V5.50 (2007-12-27)

This is the 5th time to release the new version. The update contents include:

Add +ZIPOVERTIME、+ZDNSGETIP、+ZDNSP、+ZDNSS

Document Version: V5.4 (2007-08-07)

This is the 5th time to release the new version. The update contents include:

Add 3.7 SMS and 3.8 Phonebook

Document Version: V5.3 (2007-07-27)

This is the 4th time to release the new version. The update contents include:

Revise 2.1.4 +CRSL: ring volume setup/inquire

Add +ZGPIO,+CTA command

Delete 2.3.2 AT+ZNFREQ

Revise value range in chapter 2.7.8 +ZIPCLOSE

Revise value range in chapter 2.7.8 +ZIPCLOSEU

Revise 2.7.18 +ZDORMANT enter dormant mode forwardly

Document Version: V5.2 (June-26-2007)

This is the third time to release the new version. The update contents include:

Add 2.1.21 +ZGSN: Inquire module's ESN

Add 2.2.23 +ZTXGAIN: Set SPK Gain in Current Audio Channel

Add 2.7.13 +ZIPGETPORT: Capture the socket port number of module

Add 2.7.19 +SETCONNECT: Set the Module's Exterior Protocol Stack Dialing Back to Connect

Add 2.2.24 +ZRXGAIN: Set MIC Gain in Current Audio Channel

Document Version: V5.1 (June-04-2007)

This is the second time to release the new version. The update contents include:

Change the manual name from 《AT Command Manual for ZTE Corporation's CDMA Modules》 to 《AT Command Manual for ZTE Corporation's MG815+ Modules》. Add the applicable modules such as MG815+, MG615+, MG415+, MC8530, MC4130 and MG815A.

Chapter 2 AT Commands

Delete 2.1.14 +BACKUP: Backup File System

Change the unit as 'ms' in 2.2.14 +VTD: DTMF Signal Setting

Document Version: V5.0: (March-26-2007)

This is the first time to release.

Table of Contents

1	General Description.....	10
1.1	CDMA background knowledge.....	10
1.1.1	CDMA.....	10
1.1.2	Mode&states of module.....	11
1.1.3	AT command processing design.....	12
1.1.4	Setup parameter storage.....	12
1.1.5	Abbreviation.....	13
1.2	AT Command Summary.....	14
1.2.1	Types of AT Command.....	14
1.2.2	Types of response.....	15
1.2.3	Formats of commands.....	15
2	AT Commands.....	16
2.1	General Commands.....	16
2.1.1	+CGMR: Inquire Software Version.....	16
2.1.2	+CGSN: inquire The ESN of Mobile Terminal Product.....	16
2.1.3	+CIMI: Request IMSI.....	16
2.1.4	+CRSL: Inquire / set The Volume of Ringer.....	16
2.1.5	A/: Repeat Last Command.....	17
2.1.6	+IPR: Specifies Baud Rate.....	17
2.1.7	+IFC: DTE-DCE Flow Control.....	18
2.1.8	&C: Set DCD Signal.....	18
2.1.9	&D: Set DTR Signal.....	18
2.1.10	V: DCE Response Format.....	19
2.1.11	E: Echo.....	19
2.1.12	&V: Display Current Parameter.....	19
2.1.13	&F: Restore Factory Setting.....	20
2.1.14	+RESTORE: Restore File System (Use “AT+BACKUP Before This Operation).....	20
2.1.15	&W: Save Configured Parameter Settings.....	20
2.1.16	+WCALL: Save Call Parameter Settings.....	20
2.1.17	+WDEVICE: Save AT Command Parameters.....	21
2.1.18	+ZIRM : Ring Indicator Mode.....	21
2.1.19	+ZDSLEEP: 32kHz Deep Sleep Mode.....	22
2.1.20	+ZSWV: Inquire Software Version.....	22
2.1.21	+ZSGN: Inquire Modul’s ESN.....	22
2.1.22	+ZGPIO:read &setup logic level value from output of GPIO pin.....	23
2.2	Call Control Command.....	23
2.2.1	A: Answer a call.....	23
2.2.2	D: Dial Command.....	24
2.2.3	H: Hang-Up Command.....	25
2.2.4	ATDL: Redial Last Telephone Number.....	25

2.2.5	ATS0: Automatic Answer.....	26
2.2.6	+CEER: Extended Error Report.....	26
2.2.7	+VGT: Microphone Gain Control.....	27
2.2.8	+VGR: Volume Gain Control.....	27
2.2.9	+CMUT: Microphone Mute Control.....	28
2.2.10	+SPEAKER: Speaker & Microphone Selection.....	28
2.2.11	+ECHO: Echo Cancellation.....	29
2.2.12	+SIDET: Side Tone Modification.....	29
2.2.13	+VIP: Initialize Voice Parameters.....	30
2.2.14	+VTD: Define DTMF Signals.....	30
2.2.15	+VTS: Send DTMF Signals.....	31
2.2.16	+ZSDT: DTMF START.....	31
2.2.17	+ZSDS: DTMF STOP.....	31
2.2.18	+ZFLSH: Send Flash To Base Station.....	32
2.2.19	+CLCC: Inquire Current Call Status.....	33
2.2.20	+ZTONE: Play Tone.....	33
2.2.21	+ZDTMF: Play DTMF tone.....	34
2.2.22	+ZCVPR: Set voice privacy level(need BS and terminal support).....	35
2.2.23	+ZTXGAIN: Set SPK Gain in Current Audio Channel.....	36
2.2.24	+ZRXGAIN: Set MIC Gain in Current Audio Channel.....	36
2.3	Network Service Command.....	36
2.3.1	+CNUM: configuration and query for current handset number.....	36
2.3.2	+CREG: Network Registration & Roaming.....	37
2.3.3	+CLCK: Facility Look and PIN1/PIN2 Setup/query.....	37
2.3.4	+CPWD: Change PIN1/PIN2.....	38
2.3.5	+CLIP: Calling line identification presentation.....	39
2.3.6	+CLIR: Calling line identification restriction.....	39
2.3.7	+ZRMP: Roam Preference.....	40
2.3.8	+CAD: inquire network status.....	41
2.3.9	+ZCSQ: set conditions for auto-displaying CSQ.....	41
2.4	Module Control and Status Report.....	41
2.4.1	+CPAS: module activity status.....	41
2.4.2	+CFUN: Set module's functionality.....	42
2.4.3	+ZPWROFF: Power off the module.....	42
2.4.4	+CSQ: Signal intensity query.....	43
2.4.5	+ZIND: Module Indication.....	43
2.4.6	+CCLK: Clock Management.....	44
2.4.7	+CPIN: Enter PIN.....	44
2.4.8	+CPINC: PIN Remaining Attempt Number.....	45
2.4.9	+ZPRL: inquire PRL Version information.....	46
2.4.10	+ZTMR: View Module Timers.....	46
2.4.11	+CMEE: Report Mobile Equipment errors.....	46
2.4.12	+CRC: Cellular result codes.....	47
2.5	SMS commands.....	48

2.5.1	Parameters difinition.....	48
2.5.2	+CSMS: Select message service.....	49
2.5.3	+CSDH: Show text mode parameters.....	49
2.5.4	+CPMS: Preferred Message Storage.....	49
2.5.5	+CNMI: New message indication.....	50
2.5.6	+CMGR: Read message.....	52
2.5.7	+CMGL: List message.....	52
2.5.8	+CMGS: Send message.....	54
2.5.9	+CMGW: Write Message to Memory.....	55
2.5.10	+CMSS: Send Message From Storage.....	55
2.5.11	+CMGD: Delete message.....	56
2.5.12	+ZMSGL: Set SMS Compose Language And Encoding.....	57
2.5.13	+ZMSGT: Set Timestamp of MT SMS.....	57
2.6	Phone Book Commands.....	58
2.6.1	+ZAIIP: Avoid phonebook init.....	58
2.6.2	+CPBF: Find phonebook entries.....	58
2.6.3	+CPBP: Phonebook search.....	59
2.6.4	+CPBR: Phondebook read.....	59
2.6.5	+CPBS: Select phone book memory storage.....	59
2.6.6	+ZDPB: Select The Default Phonebook Memory.....	60
2.6.7	+CPBU: Return Selected Phonebook Locations.....	60
2.6.8	+CPBW: Write phonebook entry.....	60
2.6.9	+ZDCP: Delete calls from phonebook.....	61
2.7	TCP/IP Unsolicited AT commands.....	61
2.7.1	+ZPNUM: Data service inquiry number setting.....	61
2.7.2	+ZPIDPWD: Data service ID & Password setting.....	62
2.7.3	+ZPPPOPEN: Dial-up The Module.....	62
2.7.4	+ZPPPCLOSE: Disconnect The dial-up Connection.....	62
2.7.5	+ZPPPSTATUS: Dial-up Connection Status Inquiry.....	62
2.7.6	+ZIPSETUP Set up TCP connection to send data in the TCP way.....	63
2.7.7	+ZIPSETUPU Set up TCP connection to send data in the UDP way.....	63
2.7.8	+ZIPCLOSE: Disconnect TCP Connection.....	64
2.7.9	+ZIPCLOSEU: Disconnect UDP Connection.....	64
2.7.10	+ZIPSEND: Send Data Through TCP Channel.....	64
2.7.11	+ZIPSENDU: Send Data Through UDP Channel.....	65
2.7.12	+ZIPGETIP: Capture the IP address of module.....	65
2.7.13	+ZIPGETPORT: Capture the socket port number of module.....	65
2.7.14	+ZIPSTATUS: Inquire whether TCP socket is successfully connected.....	66
2.7.15	+ZPPPREDIAL: Set the interval of redialing after dropped.....	66
2.7.16	+ZPKEEPALIVE: Turn on/off the function of keeping alive.....	66
2.7.17	+VKLStatus: Turn on/off the function of Virtually Keep-Online.....	67
2.7.18	+ZDORMANT: Enter dormant Mode forwardly.....	68
2.7.19	+CTA: set interval to enter dormant Mode.....	68
2.7.20	+ZSETCONNECT: Set how to respond “connect” during dial-up through Module’s	

Exterior Protocol Stack.....	69
2.7.21 +ZIPOVERTIME: set or close send data's overtime.....	69
2.7.22 +ZDNSGETIP: domain name resolution.....	69
2.7.23 +ZDNSP: set first choose DNS server's IP address.....	70
2.7.24 +ZDNSS: set standby DNS server's IP address.....	70
2.8 Indication list of TCP/IP affairs.....	70
2.8.1 +ZIPRECV: Receive The Data From TCP Channel.....	70
2.8.2 +ZIPRECVU: Receive The Data From UDP Channel.....	71
2.8.3 +ZPPPSTATUS: Indicate The Shift of Connection.....	71
2.8.4 +ZTCPESTABLISHED: Indicate The Connection With TCP.....	72
2.8.5 +ZTCPCLOSED: Indicate The Disconnection With TCP.....	72
2.9 Unsolicited AT Commands.....	72
2.9.1 +ZCED: Cell Environment Description Indication.....	72
2.9.2 +CCWA: Call Waiting Indication.....	73
2.9.3 +CDS: SMS Status Report Indication Directly Displayed.....	73
2.9.4 +CLIP: Caller ID Presentation.....	74
2.9.5 +CMT: Incoming Message Directly Displayed.....	74
2.9.6 +CMTI: Incoming Message Stored in Memory.....	74
2.9.7 +CREG: Registration & Roaming.....	74
2.9.8 +CRING: Incoming Call.....	75
2.9.9 +CSQ: Automatic Signal Intensity Indication.....	75
2.9.10 +RING: Incoming Call.....	75
2.9.11 +ZCANS: Call Answered.....	76
2.9.12 +ZCMP Pulse_count signal indication.....	76
2.9.13 +ZCCNT: Call Connected.....	77
2.9.14 +ZCEND: Call Ended.....	77
2.9.15 +ZFLSH: Flash indication.....	78
2.9.16 +ZIND: General Indicator.....	78
2.9.17 +ZCORG: Call Originated.....	78
2.9.18 +ZCVPR: Call Privacy indication.....	79
2.9.19 +ZCROAM: Roaming Indication.....	79
2.9.20 +ZNAM: NAM Change Indicator.....	79
2.9.21 +ZMGF: SMS Message Storage Full.....	80
2.10 Return parameters.....	80
2.10.1 Report code of AT command.....	80
2.10.2 Error report result : +CME ERROR: <error>.....	81
2.10.3 Message service failure result code: +CMS ERROR : <er>.....	81
2.10.4 Extended Error Report (+CEER) Call Processing codes.....	82
2.10.5 Parameters Storage.....	82
2.10.6 Possible codes for SMS-STATUS-REPORT as reported by +CDS and +CMGR.....	83
3 Applications and cautions.....	85
3.1 First time to supply power.....	85
3.2 Power off and reset.....	85
3.3 Originate a call.....	85

3.4 Incoming call.....	86
3.5 Call Forwarding Setting.....	86
3.6 TCP/IP protocol stack.....	86
3.7 SMS.....	89
3.8 Phonebook.....	91
3.9 Parameters.....	92
3.10 Defalt settings.....	92

1 General Description

1.1 CDMA background knowledge

1.1.1 CDMA

CDMA (Code Division Multiple Access) is a new but mature wireless communication technology. CDMAOne is an early CDMA technology, which was researched by QUALCOMM corporation and consummated by many other companies. The remarkable features of CDMA, with large-capacity and short cell radius, are digital expanded frequency technology and specific encode method. IS-95 is the commercial edition for 1st phase use of china Unicom, which supports circuit switch technique to data service, and is better than GSM in cellphone communication domain. Nowadays it changes a lot.

CDMA-1x technology is the advanced edition of IS-95, which supports both circuit switch and packet switch technique to data service. The maximum data rate is 153.6 kbps, But there is no sacrifice for voice performance. The capacity of 1X is nearly twice than IS-95 CDMA system and has long-time stand by feature. The content of this document is based on CDMA2000 1X technology.

ZTE corporation optimized air interface and researched a digital trunking system called GOTA (Global open Trunking Architechture), which is based on 3rd generation mobile communication. GOTA gives solutions around two key technologies: wireless channel share and fast link, at the same time, the new trunking service has no negative effect to traditional communication service and network resources.

Modem and CDMA module:

Traditional MODEM link is based on PSTN[1][2], we called it wired MODEM in habit:

In the application environment of CDMA wireless module, devices of users like PC are equal to DTE, CDMA module is DCE. Line link is replaced by CDMA wireless network, MSC, BTS, BSC, IWF are spreaded in PSTN portion, which are transparent for users. Because of that, users can comprehend the module as a traditional MODEM, that's the reason why we call the module "MODEM" under some situations.

For data transmission and increasing network use efficiency, we expand foregoing concept again, supporting TCP/IP protocol stack and interface, virtually keep-online control, GOTA application commands.

- The function of TCP/IP protocol stack likes Berkeley Socket in UNIX system. Users can control it as the same operation process and method, the difference is only that controlling module via AT commands.
Note: we only supply client operation. If you want to make a socket server, you should dial-up through

module and run server application programme. But it is not available if DTE without operation system or OS don't support MODEM.

- Virtually Keep onLine — VKL technology is an AT interface developed from dormant mode in CDMA standard. The purpose is help users to setup dormant function according to their own service features, and improve air interface resources, reduce operator's cost, finally decrease customers' payment. Commonly, module only occupies network stuff and IP address. When there is data transmitted, it takes air interface stuff. In this way, users only need to pay data transmission time cost. Supposing user's product send 2k data packet per 3 minutes, hence data transmission time is 2 seconds approximately. In traditional way, payment time is 182 seconds. Oppositely, it takes only less than 8 seconds by using VKL technology.
- GOTA application commands supply usage of GOTA technology(ZTE's patent). We will describe it in another specific document.

1.1.2 Mode&states of module

Modules can only receive specific orders in corresponding mode. So mode and states are important for understanding AT commands. They define current status of modules from different angle, hence they can not be comprehended outwardly. Attention, for your convenient understanding, the categories and definitions here are predigested according to ZTE module. Users can consult TIA/EIA-602 standard for more detailed and complete definitions.

- Mode (from operation angle):
 - Data mode : module is transmitting data, including asynchronous circuit data and packet data.
 - Fax mode: module is sending/receiving fax.
 - Voice mode: module is originating/receiving voice call.
 - Idle mode: module is standing by.
 - Off-line mode: CDMA network can not supply service to module, maybe no signal or authentication.
- State:
 - command state: module doesn't connect with remote device, but it can receive AT commands, process and return result.
 - online command state: module connects with remote device, it also receives AT commands, processes and returns result.
 - online data state: module connects with remote device, all data received is considered from remote transmission.
- States alternation:
 - command state to online data state: module originates a remote link(ATD command) to complete the alternation, or responds remote call (ATA). When ATD command has been executed successfully, module responds and enters online command state. DCD pin on firmware is set to low level.
 - online data state to command state: +++ command or setting DTR pin to high level could complete this alternation. Module returns OK to quit online state. The link errors or failure of PPP protocol negotiation will bring module to command state automatically. Users judge the reason for alternation with PPP responses and error codes.

—online data state to online command states: DTR(108/2) control; Call TCP/IP protocol stack extended by ZTE.

1.1.3 AT command processing design

AT command process mode is asynchronous, sending commands, waiting for response, processing response and sending a new command. There is no any limit to response time in AT commands design as standards. We also don't promise the consistency of command response time in each version. It must be a great design that monitors all commands from RS-232 interface and processes data. If the load is too heavy for CPU, the response can be delayed, but can't miss any data from UART.

Module should be out of factory with default settings. It was not defined for all by standard but maybe defined by other organizations or individuals. Because of that, for better software design, it need to set all relative states to anticipant value after powering on. It is the same in Unix and Windows operation system, you can refer that.

Please try to rest module when link error appears so many times. Sometimes network will require terminals to register again, which can be done via AT+ZPWROFF.

- Human-machine interface

AT commands are used to control and configure module, which is designed to read conveniently at the beginning. Along with intelligentizing for terminals, AT commands are explained and applied by processor (CPU,MCU). Extended AT commands format trend to be convenient for processing, for example, application of invisible characters like <ctrl>+z. It will bring inconvenience to manual use, but which is worthy. You can set returned command's format as visible characters in default setting through ATV command, or returning characters with number format through ATV0 command. It will be convenient to process for CPU.

At the same time, perhaps different COM debugging tools process characters (<CR>,<LF>,etc) in different ways, and the feedback may be distinct. Users don't need to worry about it because processor can understand the meaning within commands. If users want to check display detailly, there are 2 methods: one is hex, another is using hyper terminal.

1.1.4 Setup parameter storage

Module can save settings and parameters with AT commands itself, which will be valid after resetting. For the convenience of manual use, users can save them to FLASH memory, including:

- Parameters defined by Modem, saving through &W.
- Incoming call, originated call and missed call record, setting and saving through &WCALL
- Other configurations, setting and saving through &WDEVICE
- Auto save, including +IPR, +ZDPB, +CPBW, +ZDCP, +ZPIN, +ZMSGL, +ZMSGT. Information within these commands will be automatically saved immediately after sending.

For processor, settings can be done via program running, so parameters need not to be saved. Otherwise, FLASH memory will be erased and writed too much, at the same time, the responding time will be lengthened. We mightily suggest that you shouldn't save parameters if it is unnecessary.

Because of bad working situation for vehicle-mounted devices, module and UIM will be damaged badly if they are readed/writed frequently. We mightily suggest you do not save parameters in vehicle-mounted terminals.

ZTE CDMA modules provide AT command interface, through which users could conveniently communicate with external devices. AT Command Set provided by ZTE CDMA modules not only covers standard CDMA voice and data applications, but contains some commands according to GSM standard, as well as some ZTEiT exclusive commands which bring great conveniences to users.

1.1.5 Abbreviation

Abbreviations	Explanation
ADC	Analog-Digital Converter
AFC	Automatic Frequency Control
AGC	Automatic Gain Control
ARFCN	Absolute Radio Frequency Channel Number
ARP	Antenna Reference Point
ASIC	Application Specific Integrated Circuit
BER	Bit Error Rate
BTS	Base Transceiver Station
CDMA	Code Division Multiple Access
CDG	CDMA Development Group
CS	Coding Scheme
CSD	Circuit Switched Data
CPU	Central Processing Unit
DAI	Digital Audio interface
DAC	Digital-to-Analog Converter
DCE	Data Communication Equipment
DSP	Digital Signal Processor
DTE	Data Terminal Equipment
DTMF	Dual Tone Multi-Frequency
DTR	Data Terminal Ready
EFR	Enhanced Full Rate
EGSM	Enhanced GSM
EMC	Electromagnetic Compatibility
EMI	Electro Magnetic Interference
ESD	Electronic Static Discharge
ETS	European Telecommunication Standard
FDMA	Frequency Division Multiple Access
FR	Full Rate
GPRS	General Packet Radio Service
GSM	Global Standard for Mobile Communications
HR	Half Rate
IC	Integrated Circuit

Abbreviations	Explanation
IMEI	International Mobile Equipment Identity
ISO	International Standards Organization
ITU	International Telecommunications Union
LCD	Liquid Crystal Display
LED	Light Emitting Diode
MCU	Machine Control Unit
MMI	Man Machine Interface
MS	Mobile Station
PCB	Printed Circuit Board
PCL	Power Control Level
PCS	Personal Communication System
PDU	Protocol Data Unit
PLL	Phase Locked Loop
PPP	Point-to-point protocol
RAM	Random Access Memory
RF	Radio Frequency
ROM	Read-only Memory
RMS	Root Mean Square
RTC	Real Time Clock
SIM	Subscriber Identification Module
SMS	Short Message Service
SRAM	Static Random Access Memory
TA	Terminal adapter
TDMA	Time Division Multiple Access
TE	Terminal Equipment also referred it as DTE
UART	Universal asynchronous receiver-transmitter
UIM	User Identifier Management
USB	Universal Serial Bus
VSWR	Voltage Standing Wave Ratio
ZTE	ZTE Corporation

1.2 AT Command Summary

1.2.1 Types of AT Command

At commands can be classified into four types:

- Commands without parameters:

A concise command: the module finishes the requirement according to the internal parameters and responds it. The format is AT[+|&]<command>.

e.g: AT+CSQ、AT&V、AT+ZPPPOPEN

- Query Commands:
Used to inquiry the current, responses value set by command, and the format is AT+IPR?
- Help Commands:
Used to list the possible parameters of the command, and the format is AT[+|&]<command>=? ,e.g.:
AT+IPR=?
- Commands with parameters:
Commonly used commands providing great flexibility, and the format is
AT[+|&]<command>=<par1>,<par2>,<par3>...
e.g: AT+ZIPSETUP=0,192.168.0.0,3100

1.2.2 Types of response

The two report will be responded.

- The result report for operating at command
Once the wrong operating, the wrong code will be reponed or via CME ERRO<Err> or“CMS ERROR: <SmsErr> response wrong code. The detail in AT+CMEE.
- Event report
As the event send from network, it will be processed by module, and report it to user. Such as receiving SMS,incoming call ring and so on.

1.2.3 Formats of commands

All AT commands start with “AT” or “at”, whatever capital or lowercase,and end with <CR>.

- Commands without parameters:AT[+|&]<command>
- Query Commands: AT[+|&]<command>?
- Help Commands: AT[+|&]<command>=?
- Commands with parameters: AT[+|&]<command>=<par1>,<par2>,<par3>...

Format of response:

- <CR><LF><character string relative to AT commands><CR><LF>
- Returned error: <CR><LF><ERROR>[ERROR information]<CR><LF>
- Something special,such as ATV0 (response format) 、 ATQ1 (compress result code)

AT commands status report (OK、 ERROR) can be classified into such types below:

- It will return “ERROR” characters string unless AT commands format is correct.
- If you enable extended error report (+CMEE) ,it will return characters string“CME ERROR: <Err>”or“CMS ERROR: <SmsErr>”and different error code.
- If AT commands are executed successfully,it will return characters string”OK”.

2 AT Commands

2.1 General Commands

2.1.1 +CGMR: Inquire Software Version

Description	This command is used to get the revised software version. The definition of software version: MGXXX: the type of module BMXXXXXX: software version, the last three	
Syntax	AT+CGMR	
Demonstration	AT+CGMR	+CGMR: S/W VER: MG815 BM8A413E ZTEIT Team OK (means : the type of module is MG815, software ver: BM8A413E, software no 13E)

2.1.2 +CGSN: inquire The ESN of Mobile Terminal Product

Description	This command allows the user application to get the ESN of the product. If UIM card has been planted, the ESN is card's. Otherwise, it's module's.	
Syntax	AT+CGSN	
Demonstration	AT+CGSN	+CGSN: FE7A7704 OK

2.1.3 +CIMI: Request IMSI

Description	This command is used to read and identify the IMSI (International Mobile Subscriber Identity). If UIM card has been planted, the IMSI is card's. Otherwise, it's module's.	
Syntax	AT+CIMI	
Demonstration	AT+CIMI	+CIMI: 460030916875923 OK

2.1.4 +CRSL: Inquire / set The Volume of Ringer

Description	This command is used to set or inquire the volumm of ringer. two path ,one is handset , the other is headset. See the +SPEAKER for details
--------------------	---

Syntax	AT+CRSL=<sound level> AT+CRSL? AT+CRSL=?	
Demonstration	AT+CRSL=0 Note:Set the ringer to Min(muted)	OK
	AT+CRSL=4 Note:Set volume to Max.	OK
	AT+CRSL? Note:Inquire current set value	+CRSL: 4 OK
	AT+CRSL=? Note:inquire supported parameters	+CRSL: (0-4) OK
Defined value	<sound level> 0-4: level ringer volume Default value is 1	
Remark	Can be configured while ringing or before	

2.1.5 A/: Repeat Last Command

Description	This command repeats the previous command.	
Syntax	A/	
Demonstration	AT+CSQ?	+CSQ: 31, 99 OK
	A/	+CSQ: 31, 99 OK

2.1.6 +IPR: Specifies Baud Rate

Description	This command specifies the baud rate at which the DCE will accept commands.	
Syntax	AT+IPR=<baud rate>	
Demonstration	AT+IPR?	+IPR: 9600 OK
	AT+IPR=?	+IPR: (1200,2400,4800,9600,19200), (45,50,75,110,150,300,600,38400,57600,115200, 230400) OK
	AT+IPR=38400	OK

2.1.7 +IFC: DTE-DCE Flow Control

Description	Set up the flow control of module UART.	
Syntax	AT+IFC=<n1>,<n2>	
Demonstration	AT+IFC? (as reference, no meaning)	+IFC: 2,2 OK
	AT+IFC=?	+IFC: (0-3),(0-2) OK
	AT+IFC=0,0	OK
Defined value	< n1>: 0: none (support) 1: XON/XOFF, discard the XON/XOFF in flow. 并 2: hardware flow control 3: XON/XOFF,keep the XON/XOFF. < n2> 0: none 1: XON/XOFF, discard XON/XOFF. 2: hardware flow control	

2.1.8 &C: Set DCD Signal

Description	This command controls the Data Carrier Detect (DCD) signal.	
Syntax	AT&C	
Demonstration	AT&C0 Note: DCD always on	OK
	AT&C1	OK
	AT&C2	OK
Defined values	AT&C0 always on AT&C1 always on only for data transfer AT&C2 always on except 1 second later than data call is over.	
Remark	Default Value is 2.	

2.1.9 &D: Set DTR Signal

Description	This command controls the Data Terminal Ready (DTR) signal.	
Syntax	AT&D	
Demonstration	AT&D0	OK
	Note: The DTR signal is ignored	

	AT&D1 Note: Enter online command state following ON-to-OFF transition of circuit 108/2	OK
	AT&D2 Note: Enter command state following ON-to-OFF transition of circuit 108/2.	OK
Remark	Default Value is 2.	

2.1.10 V: DCE Response Format

Description	This command determines the DCE response format, with numbers or words.	
Syntax	ATV	
Demonstration	ATV0 Note: Display result codes as numbers	0 Note: Command is valid (0 means OK)
	ATV1 Note: Display result codes as words	OK

2.1.11 E: Echo

Description	This command is used to determine whether or not the modem echoes characters received by an external application (DTE).	
Syntax	ATE	
Demonstration	ATE0	OK
	AT	OK
	ATE1	AT
	AT	OK
Defined values	ATE0 Characters are not echoed ATE1 Characters are echoed	
Remark	Default Value is 1.	

2.1.12 &V: Display Current Parameter

Description	display current parameters.	
Syntax	AT&V	
Demonstration	AT&V	OK(returned parameters are omitted)

2.1.13 &F: Restore Factory Setting

Description	This command is used to restore the factory setting from NV memory.	
Syntax	AT&F	
Demonstration	AT&F	OK
Defined values	+CRSL;S0;+VGT;+VGR;+SPEAKER;+ECHO;+CRC;+CLIP;+CREG;+CMEE	

2.1.14 +RESTORE: Restore File System (Use “AT+BACKUP Before This Operation)

Description	Restore the file system At the process must need the “program ok” display.	
Syntax	AT+RESTORE	
Demonstration	AT+RESTORE	Start erase ok program begin program ok restart

2.1.15 &W: Save Configured Parameter Settings

Description	This command saves current configuration to FLASH memory. AT&F has higher priority than this command.	
Syntax	AT&W	
Demonstration	AT&W	OK
Defined values	The parameters can be saved via AT&W are: +ZIND;+CLIP;+VTD;S0;+VGR;+VGT;+CREG; +CMEE;+CRC;&C;&D;+IFC;+SPEAKER;+ECHO,E; +CRSL;+ZTXGAIN;+ZRXGAIN;+ZCSQ;+ZDPB;+ZMSGT	
Remarks	AT&F command has higher priority than this command	

2.1.16 +WCALL: Save Call Parameter Settings

Description	This command is used to save current call parameters to FLASH. After using the command, the module will save incoming call number, outgoing call number, and missed call number.	
Syntax	AT+WCALL	
Demonstration	AT+WCALL=1 Configuration is not auto-saved. Dial and receive the call many times	OK

	AT+WCALL Save call records to FLASH	OK
Defined values	<p><N></p> <p>0: autosave. The parameter changed each time will be immediately saved to FLASH. Upon an incoming call, the call number will be directly saved.</p> <p>1: Not autosave. If the parameters need to be saved, the command without form of parameters should be used.</p> <p>Default: autosave</p> <p>When it goes without parameters, this indicates saving call parameters to FLASH.</p>	
Remarks	AT&F has higher priority than this command	

2.1.17 +WDEVICE: Save AT Command Parameters

Description	Save current AT command configuration to FLASH After configuring it, module will save defined parameters from RAM to FLASH. AT&F has higher priority than this command.	
Syntax	AT+ WDEVICE AT+ WDEVICE =<N>	
Demonstration	AT+WDEVICE=1 Configuration is not auto-saved. AT+ZPNUM=#777 Configure it freely. AT+WDEVICE Save configuration in FLASH	OK OK OK
Defined values	<p><N></p> <p>0: autosave</p> <p>1: not auto save. Unless transfer this command without parameter.</p> <p>default setting is autosave.</p> <p>The parameters can be saved via AT&WDEVICE are: +CLIR,+CNUM, +ZPNUM,+ZPIDPWD</p>	

2.1.18 +ZIRM : Ring Indicator Mode

Description	This specific command sets or returns the state of the Ring Indicator Mode. In pulse RI mode, an electrical pulse lasting approximately 10μs is sent on the Ring Indicator signal just before sending any unsolicited AT response in order not to lose AT responses when client tasks are in sleep state. Still in RI mode, when receiving incoming calls, electrical pulses are sent on the RI signal. In up-down RI mode, no pulses are sent before unsolicited AT response, and up-down signals are sent when receiving an incoming call.
Syntax	AT+ZIRM=<n>

Demonstration	AT+ZRIM=0	OK
	AT+ZRIM=1	OK
	AT+ZRIM=?	+ZRIM: (0-1) OK
	AT+ZRIM?	+ZRIM: 1 OK
Defined values	AT+ZRIM=<n> 0: up-down RI mode 1: pulse RI mode	

2.1.19 +ZDSLEEP: 32kHz Deep Sleep Mode

Description	This specific command allows the 32 kHz sleep mode to be enabled or disabled. When sleep mode is entered, the product uses a 32 kHz internal clock during inactivity stages. When enabled, sleep mode is active after 1 to 15 minutes.	
Syntax	AT+ZDSLEEP=<mode>	
Demonstration	AT+ZDSLEEP=1 Note: Enable sleep mode	OK
	AT+ZDSLEEP=0 Note: Disable sleep mode	OK
Defined values	<mode> 0: Disable sleep mode 1: Enable sleep mode	

2.1.20 +ZSWV: Inquire Software Version

Description	This command is used to display software version.	
Syntax	AT+ZSWV	
Demonstration	AT+ZSWV inquire software version	+ZSWV: BM8A4150 OK

2.1.21 +ZSGN: Inquire Modul's ESN

Description	This command is used to inquire modul's ESN.	
Syntax	AT+ZSGN	
Demonstration	AT+ZSGN	+ZSGN: FE7A7704 OK
remark	After inputting this command, it will respond module's ESN directly, without parameter.	

2.1.22 +ZGPIO:read &setup logic level value from output of GPIO pin

Description	This command is used to read or setup logic level output value from appointed GPIO pin.	
Syntax	AT+ZGPIO=<N1>,<N2>,<N3> (setup logic level output value from appointed GPIO pin) AT+ZGPIO=<N1>,<N2> (read logic level output value from appointed GPIO pin)	
Demonstration	AT+ZGPIO=1,15,1 Note: set GPIO15 as output pin, and output high logic level	OK
	AT+ZGPIO=0,15 Note: read logic level output value from GPIO15	+ZGPIO: 1 OK
Defined values	<N1>: 0: read level value from GPIO 1: setup level value of GPIO <N2>: 0-56: corresponding to GPIO 0-56 <N3>: 0: low logic level 1: high logic level	
Remark	Only GPIO15, GPIO16, GPIO17, GPIO44, GPIO50, GPIO54 can be set	

2.2 Call Control Command

2.2.1 A: Answer a call

Description	When the product receives a call, it sets the RingInd signal and sends the ASCII “RING” or “+CRING: <type>” string to the application (+CRING if the cellular result code +CRC is enabled). Then it waits for the application to accept the call with the ATA command.	
Syntax	ATA	
Demonstration		RING Note: Incoming call
	ATA Note: Answer to this incoming call	OK +ZCANS:0 +ZCCNT:3
	ATH Note: Disconnect call	OK +ZCEND:29

2.2.2 D: Dial Command

Description	<p>The ATD command is used to originate a voice, data or fax call.</p> <p>For a data or a fax call, the application sends the following ASCII string to the product: ATD<nb> where <nb> is the destination phone number.</p> <p>Note: ATD<nb> is followed by PPP negotiation.</p> <p>For a voice call, the application sends the following ASCII string to the product: ATD<nb>;</p> <p>The response to the ATD command is one of the following:</p>	
	OK (0)	Command executed (voice)
	CONNECT<speed> (10, 11, 12, 13, 14, 15)	If the call succeeds, for data calls only, <speed> takes the value negotiated by the product.
	BUSY (7)	If the called party is already in Communication.
	NO ANSWER (8)	If no hang up is detected after a fixed network time-out
	NO CARRIER (3)	Call setup failed or remote user release.
Syntax	ATD<nb>[;]	
Demonstration	ATD34394036; Note: Attempt a voice call.	OK Note: Command executed. +ZCORG:34394036 Note: Voice call origination sent to Base Station. +ZCCNT:3 Note: Call Attempt ended. +ZCANS: 1
	ATD1001; Note: Example of a failed voice call attempt.	OK Note: Command executed. +ZCORG:1001 Note: Voice call origination sent to Base Station. +ZCEND:3 Call Attempt failed.

Direct Dialing from a phonebook (stored in the RUIM card or NV) can be performed with the following command:

ATD><index>; to call <index> from the selected phonebook (by the +CPBS command).

ATD>"Bill"; to call "Bill" from the selected phonebook (by the +CPBS command).

ATD>mem<index>; (mem is a phone book listed by the +CPBS=? Command) and

<index> is a valid location from the phonebook.

Syntax	ATD><index>[<▷>][;] ATD>[<mem>]<name>[<▷>][;] ATD>[<mem>]<index>[<▷>][;]	
Demonstration	AT+CPBS? Note: Which phonebook is selected	+CPBS: ME,11,100 OK Note: Command executed
	ATD>5; Note: Dial location #1 from ME phonebook.	OK Note: Command executed +ZCORG:1001 +ZCEND:3
	ATD>SM202; Note: Dial location 202 from the SIM(RUIM card) phonebook.	OK +ZCORG:1001 +ZCCCNT:3
	ATD>“Bill”; Note: This command is NOT valid for MC,RC, and LD phonebooks as they are supported in CDMA networks.	OK +ZCORG:1001 +ZCCCNT:3

2.2.3 H: Hang-Up Command

Description	The ATH (or ATH0) command is used by the application to disconnect the remote user. In the case of multiple calls, all calls are released (active, on-hold and waiting calls),then module enter command state.	
Syntax	ATH	
Demonstration	ATH Note: Ask for disconnection.	OK +ZCEND:10

2.2.4 ATDL: Redial Last Telephone Number

Description	This command is used by the application to redial the last number used in the ATD command. It only redials the last originated call(the number entered voice mode)	
Syntax	ATDL	
Demonstration	ATDL	OK +ZCORG:1001 +ZCCNT:3

2.2.5 ATS0: Automatic Answer

Description	<p>This S0 (zero) parameter determines and controls the product automatic answering mode(only for voice call and fax)</p> <p>It will enter voice call mode or fax mode.</p> <p>Configured value is time, or you can comprehend it as ring times.</p>	
Syntax	ATS0=<value>	
Demonstration	ATS0=2 Note: Automatic answer after 2 rings.	OK
	ATS0? Note: Current value.	002 OK
	ATS0=0 Note: No automatic answer.	OK
Note	<p><value>:</p> <p>0 no auto answer</p> <p>1—255 auto answer after(value-1)*6S</p>	

2.2.6 +CEER: Extended Error Report

Description	<p>This command gives the cause of any general call processing error or malfunction.</p> <p>See CEER error list..</p>	
Syntax	AT+CEER	
Demonstration	ATD1001;	OK +ZCORG:1001 +ZCCNT:3
	ATD1001; Note: Outgoing voice call while already in a call.	ERROR
	AT+CEER Note: Ask for reason of release.	+CEER: Error 2 OK Note: Operation not allowed when call in progress.

2.2.7 +VGT: Microphone Gain Control

Description	<p>This command set the microphone gain of the current audio path.</p> <p>Module has 2 audio pathes:one is handset,another is headset.</p> <p>Select suitable one before configuring.refer +SPEAKER command for details.</p> <p>You can configure it as following to increase input gain while handset path is selected:</p> <p>AT+SPEAKER=1</p> <p>AT+VGT=3</p>	
Syntax	AT+VGT=<MicGain>	
Demonstration	AT+VGT=2	OK
	AT+VGT? Note: Interrogate current value.	+VGT: 2 OK
	AT+VGT=? Note: inquire parameter range	+VGT: (0-3) OK
Defined values	<MicGain> 0-3	

2.2.8 +VGR: Volume Gain Control

Description	<p>This command is used to set up the output gain of current audio path.</p> <p>Module has 2 audio pathes:one is headset,another is handset.</p> <p>Select suitable one before configuring.refer +SPEAKER command for details.</p> <p>You can configure it as following to increase output gain while handset path is selected:</p> <p>AT+SPEAKER=1</p> <p>AT+VGR=3</p>	
Syntax	AT+VGR=<Rgain> AT+VGR=? AT+VGR?	
Demonstration	AT+VGR=2	OK
	AT+VGR? Note: Interrogate current value.	+VGR: 2 OK
	AT+VGR=? Note: inquire parameter range.	+VGR: (0-4) OK
Defined values	<Rgain> 0-7 0: mute 7: maximum	

2.2.9 +CMUT: Microphone Mute Control

Description	<p>This command is used to mute the audio input.</p> <p>It will shield input from selected audio path after opening mute control.</p> <p>Module has 2 audio pathes:one is headset,another is handset.</p> <p>Select suitable one before configuring.refer +SPEAKER command for details.</p>	
Syntax	<p>AT+CMUT=<Mode></p> <p>AT+CMUT=?</p> <p>AT+CMUT?</p>	
Demonstration	<p>AT+CMUT=?</p> <p>Note: Test command</p>	<p>+CMUT: (0-1)</p> <p>OK</p>
	<p>AT+CMUT=1</p> <p>Note: Mute ON</p>	<p>OK</p>
	<p>AT+CMUT=0</p> <p>Note: Mute OFF</p>	<p>OK</p>
Defined values	<p><Mode></p> <p>0: Microphones mute off (default value).</p> <p>1: Microphones mute on.</p>	

2.2.10 +SPEAKER: Speaker & Microphone Selection

Description	<p>This command is used to select the speaker and the microphone set.</p> <p>Module has 2 audio pathes:one is microphone,another is speaker.</p>	
Syntax	<p>AT+SPEAKER=<ActiveSpkMic></p> <p>AT+SPEAKER?</p>	
Demonstration	<p>AT+SPEAKER=0</p> <p>Note: Speaker ONE and Micro ONE</p>	<p>OK</p>
	<p>AT+SPEAKER?</p>	<p>+SPEAKER: 0</p> <p>OK</p>
Defined values	<p><ActiveSpkMic></p> <p>0: HEADSET</p> <p>1: HANDSET</p>	

2.2.11 +ECHO: Echo Cancellation

Description	<p>This command is used to enable, disable or configure the Echo Cancellation functions for voice calls.</p> <p>Echo elimination is realized by DSP chip voice match technique. The delay of echo is a match parameter. Module has a high level requirement to echo delay, it's very hard to give a theoretic value. We suggest to carry out it according to the environment.</p>	
Syntax	AT+ECHO=<mode>	
Demonstration	AT+ECHO=0 Note: Set Echo Cancellation Off	OK
	AT+ECHO? Note: Read current settings	+ECHO: 0 OK
	AT+ECHO=2 Note: Set Echo Cancellation to Headset	OK
Defined values	<mode> 0: Vocoder Echo Cancellation Off 1: Ear Seal Echo Cancellation 2: Head Set Echo Cancellation 3: Audio set echo cancellation 4: Speaker Echo Cancellation for car kit operation 5: Default Echo Cancellation for current path settings	

2.2.12 +SIDET: Side Tone Modification

Description	<p>This specific command is used to set the level of audio feedback in the speaker.</p> <p>It's easier to use this command to debug audio circuit.</p> <p>Module has 2 audio paths: one is microphone, another is speaker.</p> <p>Select suitable one before configuring. refer +SPEAKER command for details.</p>	
Syntax	AT+SIDET=<val1>,<val2>	
Demonstration	AT+SIDET=1,0	OK
	AT+SIDET? Note: Current value.	+SIDET: 1,0 OK
Defined values	<val1> 0: SideTone is disabled 1: SideTone is enabled <val2> 0: No side tone 1: Handset Sidetone levels 2: Headset Sidetone levels 3: Max Sidetone level	

2.2.13 +VIP: Initialize Voice Parameters

Description	This command allows voice parameters to be restored from NV memory.	
Syntax	AT+VIP	
Demonstration	AT+VIP	OK
Defined values	These parameters will restored while execute this command: -Gain parameters of MIC and SPK -Audio selection parameters -echo control parameters	

2.2.14 +VTD: Define DTMF Signals

Description	The product enables the user application to send DTMF tones over the CDMA network.This command is used to define tone duration (the default value is 0, 0).	
Syntax	AT+VTD=<ON>,<OFF> AT+VTD=? AT+VTD?	
Demonstration	AT+VTD=4,3 Note: To define 300 ms on tone duration and 200 ms off tone duration.	OK
	AT+VTD=?	+VTD: (0-5) , (0-3) OK
Defined values	<ON> 0: 95 milliseconds 1: 150 milliseconds 2: 200 milliseconds 3: 250 milliseconds 4: 300 milliseconds 5: 350 milliseconds <OFF> 0: 60 milliseconds 1: 100 milliseconds 2: 150 milliseconds 3: 200 milliseconds	

2.2.15 +VTS: Send DTMF Signals

Description	This command enables tones to be transmitted. You can dial a ext or use choosed button to input relevant characters. This command is available only while in a call state(conversation).	
Syntax	AT+VTS=<Tone> <Tone>: 0-9,*,#, A, B, C, D	
Demonstration	AT+VTS=#	OK
	AT+VTS=11	OK
	AT+VTS=4AB	OK
Defined values	<Tone>: 0-9,*,#, A, B, C, D	

2.2.16 +ZSDT: DTMF START

Description	Start a DTMF tone while in a call state (conversation).	
Syntax	AT+ZSDT=<X>	
Demonstration	AT+ZSDT=2 Note: Starts DTMF tone.	OK
Defined values	<X>: 0-9,*,#	

2.2.17 +ZSDS: DTMF STOP

Description	Stops a DTMF tone while in a call state (conversation)	
Syntax	AT+ZSDS	
Demonstration	AT+ZSDS	OK
	Note: Stops DTMF tone	

2.2.18 +ZFLSH: Send Flash To Base Station

Description	<p>This command sends a flash or flash with information to the base station. The flash command is used to manage call waiting and 3-way calls, need network support.</p> <p>For call waiting situations when the 3rd party call is received, send a flash (AT+ZFLSH) to toggle between the two different call parties. The +ZFLSH unsolicited AT command will return if a flash was sent to the base station over the air. Please note that on CDMA networks, this does not guarantee that an actual switch between calls took place, because there is no acknowledgement to the module. For 3-way calls, initiate the first call to party # 1 (see ATD). Then send a flash with information (AT+ZFLSH=18005551212) to initiate a call to party # 2, party # 1 will automatically be placed on hold. The “information” is the phone number of party # 2. Once a conversation with party # 2 is established, send a regular flash (AT+ZFLSH) to connect all 3 parties. Send another flash (AT+ZFLSH) to disconnect party # 2, or End call (see ATH) to end the call with all parties.</p>	
Syntax	<p>AT+ZFLSH</p> <p>AT+ZFLSH=<phone number></p>	
Demonstration	<p>ATD13333333333;</p> <p>Note: Make a voice call</p>	<p>OK</p> <p>+ZCORG: 13333333333</p> <p>+ZCCNT: 3</p> <p>+CCWA: "26010681",129</p> <p>Note: Indication of another incoming call</p>
	<p>AT+ZFLSH</p> <p>Note: Send a flash to the Base Station (toggle to the second call).</p>	<p>OK</p> <p>+ZFLSH</p> <p>Note: Flash sent to the Base Station. Call switches to the second call. However, this is not 100% guaranteed because the there is not confirmation from the Base Station.</p>
	<p>ATH</p> <p>Note: Release the all calls.</p>	<p>OK</p> <p>+ZCEND: 29</p>
	<p>ATD13316819064;</p> <p>Note: Make a voice call.</p>	<p>OK</p> <p>+ZCORG: 13316819064</p> <p>+ZCCNT: 3</p>
	<p>AT+ZFLSH=26010681</p> <p>Note: Place first call on hold, connect tosecond party.</p>	<p>OK</p> <p>+ZFLSH</p>
	<p>AT+ZFLSH</p> <p>Note: All 3 parties now connected.</p>	<p>OK</p> <p>+ZFLSH</p>

	AT+ZFLSH Note: Disconnect second party, connected to first party only.	OK +ZFLSH
	ATH Note: Hangup all calls	OK +ZCEND: 10

2.2.19 +CLCC: Inquire Current Call Status

Description	This command is used to inquire current call status.	
Syntax	AT+CLCC +CLCC: <state>,<mode>,<termination> return code syntax	
Demonstration	AT+CLCC Inquire current call status	+CLCC: 0,9,0 OK
Defined values	<state> 0: under command status 1: under online status 2: under command status, call made by terminal. 3: under command status, terminal is called and ring <mode> 0: voice mode 1: data mode 2: fax mode 3: SMS mode 9: can not indentify or out of commission <termination> The value is 0	

2.2.20 +ZTONE: Play Tone

Description	Play selected frequency single voice on choosed output channel. There are 2 audio channels in the module: earphone output, headphones&buzzer output. You need to select one before configuring. Refer +SPEAKER command for details.	
Syntax	AT+ZTONE=<mode>[,<dest>,<freq>,<volume>,<duration>]	
Demonstration	AT+ZTONE=1,1,300,2,50 Note: Play a tone	OK
	AT+ZTONE? Note: Current value (only for reference, meaningless)	+ZTONE: 1,1,300,2,50 OK

	AT+ZTONE=? Note: Inquire parameters can be configured	+ZTONE: (0-1),(1-1),(1-4000),(0-4),(0-50) OK
	AT+ZTONE=0 Stop playing	OK
Defined values	<p><mode> 0: Stop playing. 1: Play a tone <dest> 1: Speaker <Freq> This parameter sets tone frequency (in Hz) (mandatory if <mode>=1). The range is between 1 and 4000Hz. However, for handset and a person to hear, the effective range may be 150-4000Hz. <volume> 0~X: This parameter sets the tone volume. The default value is 1. <duration> 0~50: This parameter sets tone duration (unit of 100 ms). When this parameter is equal to 0 (default value), the duration is infinite, and the tone can be stopped by AT+ZTONE=0.</p>	

2.2.21 +ZDTMF: Play DTMF tone

Description	This command is only used to play a DTMF tone on selected channel. There are 2 audio channels in the module: earphone output, headphones&buzzer output. You need to select one before configuring. Refer +SPEAKER command for details.	
Syntax	AT+ZDTMF=<mode>[,<dtmf>,<volume>,<duration>] AT+ZDTMF ? AT+ZDTMF =?	
Demonstration	AT+ZDTMF=1,"*",2,10 Note: Play a DTMF tone	OK
	AT+ZDTMF? Note: Current value (only for reference, meaningless)	+ZDTMF: 1,"*",2,10
	AT+ZDTMF=0 Note: Stop playing	OK
Defined values	<p><mode> 0: Stop playing. 1: Play a DTMF tone <dtmf> This parameter sets the DTMF to play in {0-9,*,#,A,B,C,D} (mandatory if <mode>=1)</p>	

	<p><volume> 0~X: This parameter sets tone gain.</p> <p><duration> This parameter sets the tone duration (unit of 100 ms). When this parameter is 0 (default value), the duration is infinite, and the DTMF tone can be stopped by AT+ZDTMF=0.</p>
--	---

2.2.22 +ZCVPR: Set voice privacy level(need BS and terminal support)

Description	<p>This command requests the CDMA voice privacy level.</p> <p>CDMA voice privacy is an optional feature of CDMA networks, need network and terminal support.</p> <p>Thus, this command enables a request from the module to the base station for voice privacy. If voice privacy is activated by the base station, the unsolicited command +ZCVPR:1 will appear indicating the long code PN mask for the traffic channel has been scrambled by the base station. This command may be called before or during a voice call.</p>	
Syntax	AT+ZCVPR=<voice privacy level>	
Demonstration	AT+ZCVPR=0 Note: Set to normal voice call	OK
	AT+ZCVPR=1 Note: Request a secure voice call ATD18005551212; Note: Originate a call	<p>OK</p> <p>OK</p> <p>+ZCORG:18005551212</p> <p>+ZCCNT:0,3</p> <p>+ZCVPR:1</p> <p>Note: Voice Privacy is now ON</p>
Defined values	<p><voice privacy level>:</p> <p>0: Normal</p> <p>1: Private</p>	

2.2.23 +ZTXGAIN: Set SPK Gain in Current Audio Channel

Description	This command is used to set SPK gain in current audio channel.	
Syntax	AT+ZTXGAIN =<Rgain>	
Demonstration	AT+ ZTXGAIN =2	OK
	AT+ ZTXGAIN? Inquire current configuration	<p>+ ZTXGAIN: 2</p> <p>OK</p>
	AT+ ZTXGAIN R=? Inquire parameters can be configured	<p>+ ZTXGAIN: (0-7)</p> <p>OK</p>

Defined values	<Rgain> 1: mute 7: maximum
-----------------------	----------------------------------

2.2.24 +ZRXGAIN: Set MIC Gain in Current Audio Channel

Description	This command is used to set MIC gain in current audio channel.	
Syntax	AT+ ZRXGAIN =<Rgain>	
Demonstration	AT+ ZTXGAIN =2	OK
	AT+ ZTXGAIN?	+ ZTXGAIN: 2
	Inquire current configuration	OK
	AT+ ZTXGAIN =? Inquire parameters can be configured	+ ZTXGAIN: (0-7) OK
Defined values	<Rgain> 1: mute 7: maximum	

2.3 Network Service Command

2.3.1 +CNUM: configuration and query for current handset number

Description	Configure and query current handset number, it's a 1-15 characters number. The initial value is network registration number, users can modify it freely. The modification only affect display, and network registration still use original number. This command is used to inquire number.	
Syntax	AT+CNUM?	
	AT+CNUM=<numberx>	
	AT+CNUM=13316819064 Note: configure current handset number	OK
	AT+CNUM?	+CNUM: 13316819064
Defined values	<numberx>: telephone number for character string type, it has 1-15 characters.	

2.3.2 +CREG: Network Registration & Roaming

Description	This command is used to setup whether module displays its registration number. Registration status is the current status in the network.
--------------------	---

Syntax	AT+CREG=<mode> AT+CREG=? AT+CREG?	
Demonstration	AT+CREG=0 Note: Disable network registration unsolicited result code	+CREG:0,1 OK Note: Command valid
	AT+CREG?	+CREG: 0,1 OK Note: Unsolicited enabled, MS currently roaming.
	AT+CREG=?	+CREG: (0-1) OK Note: 0,1 <mode> values are supported
Defined values	<mode> 0: Disable network registration unsolicited result code (default) 1: Enable network registration unsolicited code result code +CREG: <stat> <stat> 0: not registered, MS is not currently searching for a new operator. 1: registered, home network. 2: not registered, MS currently searching for a base station. 4: unknown. 5: registered, roaming	

2.3.3 +CLCK: Facility Look and PIN1/PIN2 Setup/query

Description	This command is used to enable, disable and query PIN1/PIN2 code, and it could also setup call restrict. It is required to enter PIN 1 to setup call restrict. "SC" and "P2" could not be set when there is no R-UIM card.	
Syntax	AT+CLCK=<fac>,<mode>[,<passwd>] +CLCK:<status>	
Demonstration	AT+CLCK="AO",1,1234 Note: Outgoing Call Restrict	OK
	AT+CLCK="A1",1,1234 Note: Incoming Call Restrict	OK
	AT+CLCK="AO",2 Note: Query Call Restrict Status	+CLCK: 1 OK
	AT+CLCK="SC",1,1234 Note: Enable PIN	OK

	AT+CLCK? Note: Get status	+CLCK:("SC",1),("P2",1),("AO",1),("AI",1) OK Note:PIN1/PIN2 Code Enabled
	AT+CLCK="SC",0,55555 Note: Enter Incorrect PIN Code	+CME ERROR: 16 Note: PIN incorrect
Defined values	<fac> “SC” : PIN1 enabled (<mode> = 1) / disabled (<mode> = 0) “P2” : PIN2 enabled (<mode> = 1) / disabled (<mode> = 0) “AO” : BAOC (Barr All Outgoing Calls) “AI” : BAIC (Barr All Incoming Calls) <mode> 0: unlock the facility 1: lock the facility 2: query status	

2.3.4 +CPWD: Change PIN1/PIN2

Description	This command is used by the application to change a password. (PIN1, PIN2).	
Syntax	AT+CPWD=<fac>,<oldpwd>,<newpwd>	
Demonstration	AT+CPWD="SC",1234,5555 Note: Change UIM PIN1	OK
	AT+CPWD="SC",1234,5555	+CME ERROR: 16 Note: PIN incorrect
	AT+CPWD? Note: Get status	+CPWD:("SC",8),("P2",8) OK Note: PIN1 & PIN2 passwords are supported with 8 digit maximum
Defined values	<fac>: “SC”: PIN1 “P2”: PIN2	

2.3.5 +CLIP: Calling line identification presentation

Description	This command is used to set whether incoming call function is opened. Note: this setting will affect Ring indication.	
Syntax	AT+CLIP=<mode> +CLIP: <mode> for AT+CLIP? +CLIP: <number>, <type> for an incoming call, after a RING indication	
Demonstration	AT+CLIP=1 Note: Enable CLIP	OK

		RING +CLIP: "1001",129
	AT+CLIP=0 Note: Enable CLIP	OK
Defined values	<mode> 0: Disable 1: Enable	
Incoming call indication syntax	+CLIP: <number>, <type> <number> incoming call number <type> incoming call type	
Remark	Default Value is 1.	

2.3.6 +CLIR: Calling line identification restriction

Description	This command allows control of the outgoing caller ID restriction supplementary service.	
Syntax	AT+CLIR=<mode> AT+CLIR?	
Demonstration	AT+CLIR=1 Note: forbid to send outgoing caller ID	OK
	AT+CLIR? Note: Ask for current functionality	+CLIR: 1 OK
Defined values	<mode>: 0: Outgoing Caller ID works normally, according to the subscription of the Caller ID service. 1: Outgoing Caller ID is restricted. The called party will see 'Restricted' on their Caller ID display. Please note that this command works by automatically pre-pending a *67 to the outgoing dialing string. Thus, this command will only work on CDMA networks that recognizes a *67 to suppress outgoing caller ID.	

2.3.7 +ZRMP: Roam Preference

Description	The Roam Preference of a CDMA module informs the MS whether it is allowed to roam on foreign CDMA networks or only allow operation on home networks. The determination of what is a foreign or home network is programmed into the PRL (Preferring Roaming List). This command simply enables or disables the capability of the MS to roam, based on the PRL configuration. After execution of the +ZRMP command, the MS may change roaming states. The unsolicited result +ZCROAM :< mode> will indicate the new state.	
Syntax	AT+ZRMP=<mode>	
Demonstration	AT+ZRMP? Note: Ask for current Mode Preference	+ZRMP: 0 OK
	AT+ZRMP=?	+ZRMP: (0-2) OK Note: Home, Affiliated, Any
	AT+ZRMP=0 Note: Allow Home only networks	OK +ZCROAM:0
	AT+ZRMP=1 Note: Allow Roaming Affiliated Networks	OK +ZCROAM:1
	AT+ZRMP=2 Note: Allow Roaming on Any Network	OK +ZRMP: 2
Defined values	<mode>: 0: Home Networks only, as defined in the PRL (default value) 1: Roaming on Affiliated networks, as defined in the PRL 2: Roaming on Any Network, as defined in the PRL.	

2.3.8 +CAD: inquire network status

Description	This command is used to inquire network status.	
Syntax	AT+CAD?	OK
Demonstration	AT+CAD?	+CAD: 1 OK
Defined values	Return value: 1: service is available 0: no network service	

2.3.9 +ZCSQ: set conditions for auto-displaying CSQ

Description	Set variety range for CSQ. When signal intensity (dB) variety value exceeds setting value (dB), module will send +CSQ indication to screen through serial port. Note: the setting here is just for signal intensity, but not CSQ feedback. Refer AT+CSQ command for details.	
Syntax	AT+ZCSQ=<NUM>	
Demonstration	AT+ZCSQ=5	+CSQ: 26,99 OK
	AT+ZCSQ?	5 OK
Defined values	<NUM>: 0-255	

2.4 Module Control and Status Report

2.4.1 +CPAS: module activity status

Description	This command returns the activity status of the module.	
Syntax	AT+CPAS	
Demonstration	AT+CPAS	+CPAS: 5
	Note: Current activity status	OK
Defined values	<pas>: 0 ready (allow commands from TA/TE) 1 unavailable (does not allow commands) 2 unknown 3 ringing (ringer is active) 4 call in progress 5 asleep (low functionality) Note: status 1 and 5 will not appear under AT command mode.	

2.4.2 +CFUN: Set module's functionality

Description	This command selects the mobile station's level of functionality. AT+CFUN is equal to AT+CFUN=1 The feedback "1" indicates it can be resetted, and its meaningless. You need to reset module if you'd like to enter another mode from off-line mode.
--------------------	---

Syntax	AT+CFUN=<functionality level> AT+CFUN AT+CFUN? AT+CFUN=?	
Demonstration	AT+CFUN? Note: Ask for current functionality level	+CFUN:1 OK
	AT+CFUN=0 Note: Set phone offline	OK
	AT+CFUN=1 Note: Perform software reset	OK
Defined values	<functionality level> 0 : Set phone offline 1: Perform software reset	

2.4.3 +ZPWROFF: Power off the module

Description	This command is used to power off the module.	
Syntax	AT+ZPWROFF	
Demonstration	AT+ZPWROFF Note: Power off the module	+ZPWROFF: OK

2.4.4 +CSQ: Signal intensity query

Description	This command is used to ascertain the received signal strength indication (RSSI) and the channel frame error rate (FER).	
Syntax	AT+CSQ?	
Demonstration	AT+CSQ? 	+CSQ: <RSSI>,<FER> OK
Defined values	<RSSI>: 0-31 valid value ranges. The larger value means the signal intensity is better, and it may fail to originate a call if the value is under 16. Signal intensity range is -75 to -125dB, the conversion formula is: $31 \times (125 - \text{dB}) / 50$ <FER>: 99: not known or not detectable currently always returns 99.	

2.4.5 +ZIND: Module Indication

Description	This command is used to set the indication of module informations:	
Syntax	AT+ZIND= <IndLevel>	
Demonstration	AT+ZIND=8 Note: Start-up the indication of module to port.	OK
	AT+ZIND=9 Note: Start-up the indication of module to port and UIM card.	OK
Defined values	<IndLevel>: 2(bit-1): saved 4(bit-2): saved 8(bit-3): ready for receiving AT commands 16(bit-4): saved 32(bit-5): saved 64(bit-6): indicate the networking service is useable 128(bit-7): indicate network is lost If set <IndLevel> to 0, there isn't any indication. The <IndLevel> can also add up, such as: AT+ZIND=72 (8+64: networking、 module status indication). Defined value: 0-255.	

2.4.6 +CCLK: Clock Management

Description	This command is used to set or get the current date and time of the MS real-time clock. String format for date/time is: "yy/MM/dd, hh:mm:ss". The time is synchronous to CDMA system and the unit is even ms. Valid years are 98 (for 1998) to 97 (for 2097).	
Syntax	AT+CCLK?	
Demonstration	AT+CCLK? Note: Get current date and time	+CCLK: "04/02/09,17:34:23.694"
	AT+CCLK="04/02/09,18:34:23"	OK

2.4.7 +CPIN: Enter PIN

Description	<p>This command is used to enter the ME passwords (CHV1 / CHV2 / PUK1 / PUK2, etc.), that are required before any ME functionality can be used. CHV1/CHV2 is between 4 and 8 digits long, PUK1/PUK2 is only 8 digits long. The application is responsible for checking the PIN after each reset or power on - if the PIN was enabled. If the input PIN is not right 3 times, users must input correct PUK to creat a new PIN. The new PIN can be used if PUK is valid.</p> <p>You can use AT+CPIN? to inquire it need to input which password.</p> <p>The response +CME ERROR: 13 (SIM failure) is returned after 10 unsuccessful PUK attempts. The SIM card is then out of order and must be replaced by a new one.</p>	
Syntax	<p>AT+CPIN?</p> <p>AT+CPIN=<pin></p> <p>AT+CPIN=<Puk>,<NewPin></p>	
Demonstration	AT+CPIN=1234	<p>OK</p> <p>Note: PIN code is correct</p>
	<p>AT+CPIN=00000000,1234</p> <p>Note: Enter PUK and new PIN</p>	<p>+CME ERROR: 16</p> <p>Note: Incorrect PUK</p>
	<p>AT+CPIN=12345678,1234</p> <p>Note: Enter PUK and new PIN, 2ne attempt</p>	<p>OK</p> <p>Note: PUK correct, new PIN stored</p>
Efined values	<p>AT+CPIN=<Puk>,<NewPin>: creat a new PIN</p> <p><Puk></p> <p>0000-9999 PUK code</p> <p><NewPin></p> <p>0000-9999 new PIN code</p> <p>AT+CPIN=<pin>: input PIN code</p> <p><pin></p> <p>00-9999 PIN code</p> <p>To ascertain which code must be entered (or not), the following query command can be used:</p> <p>AT+CPIN?</p> <p>The possible responses are:</p> <p>+CPIN: READY ME is not pending for any password</p> <p>+CPIN: UIM PIN CHV1 is required</p> <p>+CPIN: UIM PUK PUK1 is required</p> <p>+CPIN: UIM PIN2 CHV2 is required</p> <p>+CPIN: UIM PUK2 PUK2 is required</p> <p>+CPIN: PH-UIM PIN UIM lock (phone-to-UIM) is required</p> <p>+CPIN: PH-NET PIN Network personalization is required</p> <p>+CME ERROR: <err> SIM failure (13) absent (10) etc.</p>	

2.4.8 +CPINC: PIN Remaining Attempt Number

Description	<p>This specific command is used to get the number of valid attempts for PIN1 (CHV1), PIN2 (CHV2), PUK1 (UNBLOCK CHV1) and PUK2 (UNBLOCK CHV2) identifiers.</p> <p>Note: it will be back to initial value when module is reseted.</p>	
Syntax	<p>AT+CPINC</p> <p>+CPINC=<n1>,<n2>,<k1>,<k2></p> <p>AT+CPINC?</p>	
Demonstration	<p>AT+CPINC</p> <p>Note: Get the number of attempts left</p>	<p>+CPINC : 2,3,10,10</p> <p>OK</p> <p>Note: First CHV1 attempt was a failure, only 2 times left</p>
	<p>AT+CPINC?</p> <p>Note: Get the number of attempts left</p>	<p>+CPINC : 2,3,10,10</p> <p>OK</p>
Defined values	<p>+CPINC=<n1>,<n2>,<k1>,<k2></p> <p><n1>, <n2> are the attempts left for PIN1, PIN2 (0 = blocked, 3 max)</p> <p><K1>, <K2> are the attempts left for PUK1, PUK2 (0 = blocked, 10 max)</p>	

2.4.9 +ZPRL: inquire PRL Version information

Description	<p>This command inquires PRL Version information for the currently selected NAM.</p> <p>If UIM card is in use, PRL version is UIM card's ID.</p> <p>If UIM card is invalid, PRL vesion is the PRL ID assigned by operator</p>	
Syntax	<p>AT+ZPRL?</p>	
Demonstration	<p>AT+ZPRL?</p> <p>Note: Request current NAM's PRL version</p>	<p>+ZPRL: 2</p> <p>OK</p>
	<p>AT+ZPRL?</p> <p>Note: Request current NAM's PRL version</p>	<p>+CME ERROR: 41</p> <p>Note: PRL request invalid</p>

2.4.10 +ZTMR: View Module Timers

Description	<p>This command is used to read the module's accumulated internal timers, including Uptime, Call Time, and Call Count. Uptime is the number of seconds the module as been running since boot-up.</p>
--------------------	--

	<p>Call Time is the total number of seconds the module has been in a call since manufacture.</p> <p>Call count is the total number of calls made since manufacture.</p>	
Syntax	<p>AT+ZTMR</p> <p>+ZTMR: <Uptime>,<Call Time>, <Call Count></p> <p>AT+ZTMR</p> <p>AT+ZTMR?</p>	
Demonstration	AT+ZTMR	<p>+ZTMR: 1029, 45670,289</p> <p>OK</p> <p>Note:</p> <p>Uptime = 1029 seconds</p> <p>Call Time = 45670 seconds</p> <p>Call Count = 289 calls</p>

2.4.11 +CMEE: Report Mobile Equipment errors

Description	<p>This command disables or enables the use of the “+CME ERROR : <xxx>” or “+CMS ERROR :< xxx>” result code instead of simply “ERROR”.</p>	
Syntax	AT+CMEE=<error reporting flag>	
Demonstration	<p>AT+CMEE=0</p> <p>Note: Disable MS error reports, use only « ERROR »</p>	OK
	<p>AT+CMEE=1</p> <p>Note: Enable «+CME ERROR: <xxx>» or «+CMS ERROR: <xxx>»</p>	OK
Defined values	<p><error reporting flag></p> <p>0 only “error” returns</p> <p>1 error result codes return too</p>	
Remark	Default Value is 1.	

2.4.12 +CRC: Cellular result codes

Description	<p>This command gives more detailed ring information for an incoming call. Instead of the string “RING”, an extended string is used to indicate which type of call is ringing (e.g. +CRING: VOICE).</p>
--------------------	---

Syntax	AT+CRC AT+CRC=? AT+CRC?	
Demonstration	AT+CRC=0 Note: Extended reports disabled	OK
	AT+CRC=1 Note: Extended reports enabled	OK
Defined values	+CRING:VOICE for normal voice calls +CRING:DATA for all types of data calls +CRING:FAX for all types of fax calls +CRING:OTAPA for OTAPA calls +CRING:TEST for markov, loopback, and test calls +CRING:UNKNOWN for unknown/undefined calls types	

2.5 SMS commands

2.5.1 Parameters definition

<cbn> Call Back Number

<da> Destination Address

<dc> Data Coding Scheme, coded like in document [5].

<dt> Discharge Time in string format :

“yy/MM/dd, hh:mm:ss”(Year [00-99], Month [01-12],
Day [01-31], Hour, Minute, Second

<encod> Encoding

<fo> First Octet, coded like SMS-SUBMIT first octet in document [4], default value is 17 for SMS-SUBMIT

<index> Place of storage in memory.

<lang> Language

<mem1> Memory used to list, read and delete messages (+CMGL, +CMGR and +CMGD).

<mem2> Memory used to write and send messages (+CMGW, +CMSS).

<mid> CBM Message Identifier.

<mr> Message Reference.

<oa> Originator Address.

<pid> Protocol Identifier.

<priority> Message Priority

<ra> Recipient Address.

<sca> Service Center Address

<scts> Service Center Time Stamp in string format : “yy/MM/dd, hh:mm:ss”
(Year/Month/Day, Hour:Min:Seconds)

<sn> CBM Serial Number

<st> Status of a SMS-STATUS-REPORT (see section 17.7 for possible values)

<stat> Status of message in memory.

<tooa> Type-of-Address of <oa>.

<tora> Type-of-Address of <ra>.

<tosca> Type-of-Address of <sca>.

<total1> Number of message locations in <mem1>.

<total2> Number of messages locations in <mem2>.

<ts> Timestamp for MT SMS.

<used1> Total number of messages locations in <mem1>.

<used2> Total number of messages locations in <mem2>.

<vp> Validity Period of the short message, default value is 167

2.5.2 +CSMS: Select message service

Description	Inquire supported services, including originated (SMS-MO) and terminated short message (SMS-MT) + Cell Broadcast Message (SMS-CB) services.	
Syntax	AT+CSMS?	
Demonstration	AT+CSMS?	+CSMS: 0,0,0 OK
Defined values	<MO> 0: Mobile Originated SMS not supported. 1: Mobile Originated SMS supported. <MT> 0: Mobile Terminated SMS not supported. 1: Mobile Terminated SMS supported. <CB> 0: Broadcast SMS not supported. 1: Broadcast SMS supported.	

2.5.3 +CSDH: Show text mode parameters

Description	This command gives additional information on text mode result codes. SMS has numerous text format, currently, module only support plain text, so the feedback is always 0.	
Syntax	AT+CSDH	
Demonstration	AT+CSDH?	+CSDH: 0 OK

2.5.4 +CPMS: Preferred Message Storage

Description	This command allows the message storage area to be selected (for reading, writing, etc).	
Syntax	AT+CPMS=<mem1>,[<mem2>]	
Demonstration	AT+CPMS=? Note: Possible message storages	+CPMS: ("MT","BC","SR","MO"),("MO") OK
	AT+CPMS? Note: Read	+CPMS: "MT",3,30,"MO",3,30 OK
	AT+CPMS="BC"	+CPMS:0,30,3,30 OK

Defined values	<p><mem1>: Memory used to list, read and delete messages. It can be:</p> <ul style="list-style-type: none"> -“MT”: SMS Mobile Terminated message storage in NV (default) -“BC”: CBM message storage in NV. -“SR”: Status Report message storage in NV - “MO”: Mobile Originated SMS message storage.. <p><mem2>: Memory used to write and send messages</p> <ul style="list-style-type: none"> - “MO”: Mobile Originated SMS message storage. <p>If the command is correct, the following message indication is sent:</p> <p>+CPMS: <used1>,<total1>,<used2>,<total2>.</p>
-----------------------	--

2.5.5 +CNMI: New message indication

Description	This command selects the procedure for message reception from the network.	
Syntax	AT+CNMI=<mode>,<mt>,<bm>,<ds>,<bfr> AT+CNMI? AT+CNMI=?	
Demonstration	AT+CNMI=2,1,0,0,0 <mt>=1	+CMTI : “MT”,1 Note: message received
	AT+CNMI=2,2,0,0,0 <mt>=2	+CMT : “8585551212”,’98/10/01,12 :30 00”,129,1,2,5,0<CR><LF> Hello
	AT+CNMI=2,1,0,1,0 <ds>=1	OK
	AT+CMGS=“13316538879”<CR> Message to send <ctrl-Z> Note:Send a message in text mode	+CMGS : 7 OK +CDS : 2,2,’13316538879”,129, “98/10/01,12 :30 :07”,’98/10/01 12 :30 :08”, 32768 Note: message was correctly delivered

Defined values	<p><mode>: controls the processing of unsolicited result codes</p> <p>Only <mode>=2 is supported.</p> <p>Any other value for <mode> (0,1 or 3) is accepted (return code will be OK), but the processing of unsolicited result codes will be the same as with<mode>=2.</p> <p>0: Buffer unsolicited result codes in the TA. If TA result code buffer is full, indications can be buffered in some other place or the oldest indications may be discarded and replaced with the new received indications</p> <p>1: Discard indication and reject new received message unsolicited result codes when TA-TE link is reserved. Otherwise forward them directly to the TE</p> <p>2: Buffer unsolicited result codes in the TA when TA-TE link is reserved and flush them to the TE after reservation. Otherwise forward them directly to the TE</p> <p>3: Forward unsolicited result codes directly to the TE. TA-TE link specific in band used to embed result codes and data when TA is in on-line data mode</p> <p><mt>: sets the result code indication routing for SMS-DELIVERs.</p> <p>0: No SMS-DELIVER indications are routed.</p> <p>1: SMS-DELIVERs are routed using unsolicited code: +CMTI: "MT",<index></p> <p>2: SMS-DELIVERs (except class 2 messages) are routed using unsolicited code:+CMT: <oa>, <scts>, <tooa>, <lang>, <encod>, <priority> [, <cbn>], <length><CR><LF><data> (textmode)</p> <p><bm> : sets the result code indication routing for received CBMs (Cell Broadcast Message).</p> <p>0: No CBM indications are routed to the TE. The CBMs are stored.</p> <p>1: The CBM is stored and an indication of the memory location is routed to the customer application using unsolicited result code: +CBMI: "BC", <index></p> <p>2: New CBMs are routed directly to the TE using unsolicited result code (format matches that of +CBM : <oa>,[<alpha>], <scts> [,<tooa>, <length>] <CR><LF><data> (text mode)</p> <p><ds>: for SMS-STATUS-REPORTs.</p> <p>0: No SMS-STATUS-REPORTs are routed.</p> <p>1: SMS-STATUS-REPORTs are routed using unsolicited code : +CDS : <fo>,<mr>, [<ra>] , [<tora>], <scts>,<dt>,<st> (Text mode)</p> <p>2: SMS-STATUS-REPORTs are stored and routed using the unsolicited result code: +CDSI:"SR", <index></p> <p><bfr>: Default is 0.</p> <p>0: TA buffer of unsolicited result codes defined within this command is flushed to the TE</p> <p>when <mode> 1...3 is entered (OK response shall be given before flushing the codes)</p> <p>1: TA buffer of unsolicited result codes defined within this command is cleared when<mode> 1...3 is entered.</p>
----------------	--

2.5.6 +CMGR: Read message

Description	This command allows the application to read stored messages. The messages are read from the memory selected by +CPMS command.	
Syntax	AT+CMGR=<index>	
Demonstration		+CMTI: "MT",1 Note: New message received, stored in location 1
	AT+CMGR=1 Note: Read the message	+CMGR:"RECUNREAD","13352930000","04/02/25,12:58:04",1,2,0 ABCD OK
	AT+CMGR=1	+CMGR:"REC READ","13352930000","04/02/25,12:58:04",1,2,0 ABCD OK
Defined values	<p>+CMGR :< stat>, <oa>, <scts>, <lang>, <encod>, <priority> [, <cbn>] <CR><LF> <data>(for SMSDELIVER only)</p> <p>+CMGR : <stat>,<da>,<dt>,<lang>,<encod><priority>[,<cbn>]<CR><LF> <data> (for SMS-SUBMIT only)</p> <p>+CMGR : <stat>,<mr>,<scts>,<dt>,<st> (for SMS-STATUS-REPORT only)</p> <p><stat>: Status of message in memory.</p> <p><oa> : Origination Address Value in string format.</p> <p><scts>: Service Center Time Stamp in string format</p> <p><lang>: Language.</p> <p><encod>: Encoding</p> <p><priority>: Message priority:</p> <p>0 – NORMAL</p> <p>1 – INTERACTIVE</p> <p>2 – URGENT</p> <p>3 – EMERGENCY</p> <p><cbn>: Call Back Number</p> <p>Note:A message read with status “REC UNREAD” will be updated in memory with the status “RECREAD”.</p> <p>the <stat> parameter for SMS Status Reports is always “READ”.</p>	

2.5.7 +CMGL: List message

Description	This command allows the application to read stored messages, by indicating the type of the message to read. The messages are read from the memory selected by the +CPMS command.
--------------------	---

Syntax	<p>AT+CMGL=<stat></p> <p>+CMGL : <index>, <stat>, <da/oa>, <lang>, <encod> <CR><LF><data> (for SMS-DELIVER and SMS-SUBMIT, may be followed by other <CR> <LF> +CMGL:<index> ...) +CMGL : <index>,<stat>,<fo>,<mr>,<scts>,<dt>,<st> (for SMS-STATUS-REPORT only, may be followed by other <CR><LF>+CMGL:<index>...)</p>	
Demonstration	AT+CMGL="ALL"	<p>+CMGL:0,"REC READ","133*****",6,4</p> <p>test</p> <p>+CMGL:1,"REC UNREAD","133*****",6,4</p> <p>test</p> <p>+CMGL:2,"REC UNREAD","133*****",6,4</p> <p>test</p> <p>OK</p>
	AT+CMGL="UNREAD"	<p>+CMGL:1,"REC UNREAD","133*****",6,4</p> <p>test</p> <p>+CMGL:2,"REC UNREAD","133*****",6,4</p> <p>test</p> <p>OK</p>
Defined values	<p>AT+CMGL="<stat>"</p> <p>"UNREAD" received unread messages</p> <p>"READ" received read messages</p> <p>"USENT" stored unsent messages</p> <p>"SENT" stored sent messages</p> <p>"ALL" all messages</p> <p>Note:</p> <p>1.<stat> must be enclosed by ASCII character "(0x22)</p> <p>2.For SMS Status Reports, only "ALL" and "READ"</p>	

2.5.8 +CMGS: Send message

Description	<p>To send the message, simply type, <ctrl-Z> character is the end tag. <ctrl-Z> is 0X1A in ASCII, and 0X00 0X1A in Unicode.</p> <p>This command can be aborted using the <ESC> character when entering text. <ESC> is 0x1B in ASCII, and 0X00 0X1B in Unicode.</p> <p>The <length> parameter is optional, it is used to set the length of the text string. The command will only process the number of bytes as specified by <length> regardless of whether it contains <ctrl-Z>, <ESC>, or <backspace> characters. We suggest mightily that use <length> to ensure the integrity of message.</p> <p>The <priority> and <cbn> parameters are optional, and are used to set message priority and call back number. Default message priority is NORMAL, and call back number is not included in the message unless it is specified using this optional field.</p> <p>Note: Chinese SMS code supports UNICODE, and English SMS code supports ASCII. Use +ZMSGL to appoint the language and coding manner before sending.</p>	
Syntax	<p>AT+CMGS= <da> [,<length>] [,<priority>][,<cbn>] <CR></p> <p>Text is entered <ctrl-Z / ESC> (0X1A/0X1B)</p> <p>Parameters like <length>, <priority> and <cbn> can be elided.</p>	
Demonstration	AT+ZMSGL=1,2	OK
	AT+CMGS="13316538879"<CR> ABC<ctrl-Z>	+CMGS:4 OK +CDS:2,4,"13316538879",129,"04/02/26, 11:14:50","04/02/26,11:14:54",32768 (CNMI=2,1,1,1,0)
Defined values	<p><da> : Destination Address Value in string format.</p> <p><length> : Length of the text message (in bytes).</p> <p><priority>: Message priority: 0– NORMAL 1– INTERACTIVE 2– URGENT 2– EMERGENCY</p> <p><cbn>: Call Back Number</p>	

2.5.9 +CMGW: Write Message to Memory

Description	<p>This command stores a message in memory (either SMS-SUBMIT or SMS-DELIVERS).</p> <p><ctrl-Z> character is the end tag. <ctrl-Z> is 0X1A in ASCII, and 0X00 0X1A in Unicode.</p> <p>This command can be aborted using the <ESC> character when entering text. <ESC> is 0x1B in ASCII, and 0X00 0X1B in Unicode.</p> <p>The <length> parameter is optional, it is used to set the length of the text string. The command will only process the number of bytes as specified by <length> regardless of whether it contains <ctrl-Z>, <ESC>, or <backspace> characters. We suggest mightily that use <length> to ensure the integrity of message.</p> <p>The <priority> and <cbn> parameters are optional, and are used to set message priority and call back number. Default message priority is NORMAL, and call back number is not included in the message unless it is specified using this optional field.</p> <p>Note: Chinese SMS code supports UNICODE, and English SMS code supports ASCII. Use +ZMSGL to appoint the language and coding manner before sending.</p>	
Syntax	<p>AT+CMGW="<oa/da>",<length>,<priority>,<cbn><CR> enter text</p> <p><ctrl-Z/ESC></p>	
Demonstration	AT+ZMSGL=1,2	OK
	AT+CMGW="13316538879"<CR> ABC<ctrl-Z>	+CMGW:2 OK
Defined values	<p><oa/da>: Originating or Destination Address Value in string format.</p> <p><Length>: Length of the text message (in bytes).</p> <p><Priority>: Message priority:</p> <p>0 – NORMAL</p> <p>1 – INTERACTIVE</p> <p>2 – URGENT</p> <p>3 – EMERGENCY</p> <p><cbn>: Call Back Number</p>	

2.5.10 +CMSS: Send Message From Storage

Description	<p>This command sends a message stored at location value <index>.</p> <p>If a new recipient address <da> is given, it will be used instead of the one stored with the message.</p>	
Syntax	<p>AT+CMSS=<index>[,<da> [,<toda>]]</p> <p>+CMSS : <mr> or +CMS ERROR: <err></p>	
Demonstration	AT+CMGW="13316538879"<CR> ABC<ctrl-Z>	+CMGW:2 OK

	AT+CMSS=2,13316538879 Note: Send the message 2 to a different destination number	+CMSS:1 OK +CDS:2,1,"13316538879",129,"04/02/26,17:00:14","04/02/26,17:00:17",32768 (CNMI=2,1,1,1,0) Note: Successful transmission
	AT+CMSS=2 Note: send the message 2 to a unsure number	+CMSS:2 OK +CDS:2,2,"13316538879",129,"04/02/26,17:04:24","04/02/26,17:04:29",32768 (CNMI=2,1,1,1,0) Note: Successful transmission

2.5.11 +CMGD: Delete message

Description	This command is used to delete one or several messages from preferred message storage.	
Syntax	AT+CMGD=<Index>[,<DelFalg>]	
Demonstration	AT+CMGL="all"	+CMGL:0,"REC READ","8591",0,4 test, +CMGL:1,"REC READ","128",0,4 TEST +CMGL:2,"STO SENT","13316538879",6,4 ABC OK
	AT+CMGD=3 Note: Delete message 3	OK
	AT+CMGD=1,4 Note: Delete all messages	OK
	AT+CMGL="all"	OK

Defined values	<p><index>The index number of stored messages</p> <p><DelFlag></p> <p>0 Delete message at location <index></p> <p>1 Delete All READ messages</p> <p>2 Delete All READ and SENT messages</p> <p>3 Delete All READ, SENT and UNSENT messages</p> <p>4 Delete All messages.</p> <p>Note: when the preferred message storage is “SR”, as SMS status reports are assumed to have a “READ” status, if <DelFlag> is greater than 0, all SMS status reports will be deleted.</p>
-----------------------	--

2.5.12 +ZMSGL: Set SMS Compose Language And Encoding

Description	<p>The +ZMSGL command sets the SMS composition language and encoding types.</p> <p>They are defined by sending side, receiving side decode it according to encoding types.</p>	
Syntax	<p>AT+ZMSGL=<lang>,<encod></p> <p>AT+ZMSGL=?</p> <p>AT+ZMSGL?</p>	
Demonstration	<p>AT+ZMSGL=1,2</p> <p>Note: Set language to English, encoding to ASCII</p>	OK
Defined values	<p><lang></p> <p>0: Unspecified</p> <p>1: English</p> <p>2: French</p> <p>3: Spanish</p> <p>4: Japanese</p> <p>5: Korean</p> <p>6: Chinese</p> <p>7: Hebrew</p>	<p><encod></p> <p>0: Octet (or Unspecified)</p> <p>1: IS91EP</p> <p>2: ASCII</p> <p>3: IA5</p> <p>4: UNICODE</p>

2.5.13 +ZMSGT: Set Timestamp of MT SMS

Description	<p>The +ZMSGT command sets the timestamp that will be used when the module receives a Mobile Terminated SMS.</p>	
Syntax	<p>AT+ZMSGT=<ts></p>	
Demonstration	<p>AT+ZMSGT=2</p>	OK

Defined values	<ts> 0: Original Time Stamp of the received MT SMS 1: Time of arrival – GMT Time 2: Time of arrival – Local Time
-----------------------	---

2.6 Phone Book Commands

2.6.1 +ZAIP: Avoid phonebook init

Description	This command allows the initialization off all available phonebooks to be avoided during subsequent boots. It will return error report if phonebook operation is not available. You must ensure whether it is permitted before use.	
Syntax	AT+ZAIP=<mode>	
Demonstration	AT+ZAIP?	+ZAIP: 1
	AT+ZAIP=?	+ZAIP:(0-1) OK
	AT+ZAIP=1	OK
	AT&W	
Defined values	<mode> 0: Normal operating mode. Enable. 1: No phonebook initialization. Disable.	

2.6.2 +CPBF: Find phonebook entries

Description	This command returns the first 10 phonebook entries with alphanumeric fields starting with given string. UNICODE and ASCII searching are both supported.	
Syntax	ASCII: AT+CPBF=<CR><string><Ctrl-Z> (1A) UNICODE: AT+CPBF=<CR><0X80 unicode string> <Ctrl-Z> (001A)	
Demonstration	AT+CPBF=<CR>ZTEiT<Ctrl-Z> 41 54 2B 43 50 42 46 3D 0D 5A 54 45 69 54 1A	+CPBF: 10,"888888888888",145,"ZTEiT" " OK
	AT+CPBF=<CR>ZTEiT<Ctrl-Z> 41 54 2B 43 50 42 46 3D 0D 5A 54 45 69 54 1A	ERROR ""

2.6.3 +CPBP: Phonebook search

Description	This searches the currently selected phonebook for a phone number match and returns it if found.	
Syntax	AT+CPBP= "<phone number>"	
Demonstration	AT+CPBP="8585551212" Note: Find "8585551212" in current phonebook if it exists.	+CPBP=1,"8585551212",145,"FullBook" OK
	AT+CPBP="123"	+CME ERROR: 22

2.6.4 +CPBR: Phonebook read

Description	This command returns phonebook entries from a range of locations from the currently selected phonebook.	
Syntax	AT+CPBR=<first>[,<last>]	
Demonstration	AT+CPBS="MT"	
	AT+CPBR=1	+CPBR:1,"6185551212",145,"test"
	AT+CPBR=1,3	+CPBR:1,"6185551212",145,"test1" +CPBR:2,"6185551212",129,"test2" +CPBR:3,"6185551212",115,"test3"
	AT+CPBR=12,1	ERROR
	AT+CPBR=300	+CMEE:21
Defined values	AT+CPBR=<first>[,<last>] <first> the first index. It indicates just inquire single index without last parameter. <last> the last index. First parameter must be less than last.	

2.6.5 +CPBS: Select phone book memory storage

Description	This command selects the type of memory where the phone book will be stored.	
Syntax	AT+CPBS="<bk>"	
Demonstration	AT+CPBS="EN"	OK
	AT+CPBS=?	+CPBS: ("ME","MC","LD","RC","EN")
	AT+CPBS?	+CPBS: EN,0,10 OK
Defined values	<bk> "SM" : ADN (RUIM phonebook) "LD" : LND (combined RUIM and ME last dialed phonebook) "EN" : EN (ME NV emergency numbers) "MC" : MSD (ME missed calls list) "ME" : ME (ME NV phonebook)	

	<p>“MT”: MT (combined ME and RUIM phonebook)</p> <p>“RC”: LIC (ME received calls list)</p>
--	--

2.6.6 +ZDPB: Select The Default Phonebook Memory

Description	<p>This command is used to select the default phonebook memory.</p> <p>It has two differences from AT+CPBS:</p> <ul style="list-style-type: none"> -different parameters -the setting here will be stored and valid after resetting and powering on again. <p>We suggest you use AT+CPBS.</p>	
Syntax	AT+ZDPB=<bk>	
Demonstration	AT+ZDPB=1	OK
Defined values	<p><bk></p> <p>0:ME (Module Memory)</p> <p>1:MC (Missed Calls)</p> <p>2:LD (Last 10 Dialed Calls)</p> <p>3:RC (Received Calls)</p> <p>4:EN (Emergency Numbers)</p> <p>5:SM (RUIM Card Phonebook)</p> <p>6:MT (Module Phonebook and UIM Card Phonebook)</p>	
Remark	Default Value is 0.	

2.6.7 +CPBU: Return Selected Phonebook Locations

Description	<p>This command returns the currently selected phonebook locations, maximum length for the phone number, and the maximum characters for the text portion.</p>	
Syntax	AT+CPBU?	
Demonstration	AT+CPBU?	+CPBU: (1-100),32,16 OK

2.6.8 +CPBW: Write phonebook entry

Description	<p>This command writes a phone book to location <index> in the current phonebook selected with +CPBS.</p>	
Syntax	<p>ASCII AT+CPBW=<index>,”<phonenumber>“,<TON/NPI number>,<CR><text string><Ctrl-Z> (1A)</p> <p>AT+CPBW=<index>,”<phonenumber>“,<TON/NPI number>,<CR><0X80 unicode><Ctrl-Z> (001A)</p> <p>Note: if <index> input is 0, module will auto-detect a vacant location to store. If</p>	

	there is another record with the same name or number, it will not be covered. If input number or name is vacant, the appointed record will be deleted.	
Demonstration	AT+CPBW=10,"88888888888",145,<CR>ZTEiT<Ctrl-Z> 41 54 2B 43 50 42 57 3D 31 30 2C 22 38 38 38 38 38 38 38 38 38 38 38 22 2C 31 34 35 2C 0D 5A 54 45 69 54 1A	AT+CPBW=10,"8888888888",145, ZTEiT +CPBW:010 OK
	AT+CPBW=0,"88888888888",145,<CR> ZTEiT<Ctrl-Z>	AT+CPBW=0,"88888888888",145, ZTEiT +CPBW:001 OK
Defined values	<index> Integer value for currently selected phonebook. <phone> number> Phone number is in ASCII format. Valid characters are 0-9 and *, #, -. <TON/NPI> Type of address in integer form. The MSB of this will always be set high. <text string> Any text string.	

2.6.9 +ZDCP: Delete calls from phonebook

Description	This command will delete call history from a selected phonebook if it supports this feature.	
Syntax	AT+ZDCP="<call phonebook>"	
Demonstration	AT+ZDCP? (For reference only, meaningless)	+ZDCP: "LD"
	AT+ZDCP=?	+ZDCP: ("LD","MC","RC")
	AT+ZDCP="LD"	OK
Defined values	<call phonebook>: LD: last 10 MO call MC: missed call RC: received call	

2.7 TCP/IP Unsolicited AT commands

2.7.1 +ZPNUM: Data service inquiry number setting

Description	This command is used to set the number for data service inquiry
Syntax	AT+ZPNUM=<NUM> AT+ZPNUM?

Demonstration	AT+ZPNUM=#777 Note:Setting the data service number	OK
	AT+ZPNUM? Note:Inquire the data service number	AT+ZPNUM:#777
Defined values	<NUM>: data service number	

2.7.2 +ZPIDPWD: Data service ID & Password setting

Description	This command is used to set the ID & Password of data service	
Syntax	AT+ZPIDPWD=<ID>,<PWD>	
Demonstration	AT+ZPIDPWD=card,card Setting the data service ID & password	OK
	AT+ZPIDPWD? Inquire the data service ID & Password	+ZPIDPWD:card,card
Defined values	<ID>: Data service ID <PWD>: Data service password	

2.7.3 +ZPPPOPEN: Dial-up The Module

Description	This command is used to set up the connection of data service.	
Syntax	AT +ZPPPOPEN	
Demonstration	AT +ZPPPOPEN	OK Note: Dial-up request is granted.

2.7.4 +ZPPPCLOSE: Disconnect The dial-up Connection

Description	This command is used to disconnect the link of data service	
Syntax	AT+ZPPPCLOSE	
Demonstration	AT+ZPPPCLOSE	OK

2.7.5 +ZPPPSTATUS: Dial-up Connection Status Inquiry

Description	This command is used to inquire the status of data connection	
Syntax	AT+ZPPPSTATUS	
Demonstration	AT+ZPPPSTATUS	+ZPPPSTATUS:CLOSED Note: Dial-up connection is closed

	AT+ZPPPSTATUS	+ZPPPSTATUS:OPENED Note: Dial-up connection is open
--	---------------	--

2.7.6 +ZIPSETUP Set up TCP connection to send data in the TCP way

Description	Set up the TCP connection to send data in TCP	
Syntax	AT+ZIPSETUP=<SOCKET_NUM>,<IP>,<PORT> AT+ZIPSETUP?	
Demonstration	AT+ZIPSETUP=1,10.10.1.1,5600 Note: connect to 1,10.10.1.1,5600 with socket port 1	OK
	AT+ZIPSETUP? Note: Feed back the idle socket port	+ZIPSETUP:0,2 Note: possible values: 0,2
Defined values	<SOCKET_NUM> : The values of socket port numbers: 0, 1, and 2 <IP> : Server address <PORT> : Ports connected to the server	

2.7.7 +ZIPSETUPU Set up TCP connection to send data in the UDP way

Description	Set up the UDP connection to send data in UDP	
Syntax	AT+ZIPSETUPU=<SOCKET_NUM>,<IP>,<PORT> AT+ZIPSETUPU?	
Demonstration	AT+ZIPSETUPU=1,10.10.1.1,5600 Note: connect to 10.10.1.1:5600 with socket port 1	OK
	AT+ZIPSETUPU? Note: Feed back the idle socket port	+ZIPSETUPU:0,2
Defined values	<SOCKET_NUM> : The values of socket port numbers: 0, 1, 2, and 3 <IP> : Server address <PORT> : Ports connected to the server	

2.7.8 +ZIPCLOSE: Disconnect TCP Connection

Description	This command is used to close the TCP connection
Syntax	AT+ZIPCLOSE=<NUM>

Demonstration	AT+ZIPCLOSE=2 Note: Close the channel of TCP socket port 2	OK
Defined values	<NUM>: TCP socket port:0,1,2,3,4,5	

2.7.9 +ZIPCLOSEU: Disconnect UDP Connection

Description	This commad is used to close the UDP connection	
Syntax	AT+ZIPCLOSEU=<NUM>	
Demonstration	AT++ZIPCLOSEU=2 Note: Close the channel of UDP socket port 2	OK
Defined values	<NUM>: UDP socket port:0,1,2	

2.7.10 +ZIPSEND: Send Data Through TCP Channel

Description	This command is used to send data in TCP(the longest data is 1K)	
Syntax	AT+ZIPSEND=<NUM>,<DATALEN> 0x0D <DATA>	
Demonstration	Hex format command as follows: 61 74 2B 7A 69 70 73 65 6E 64 3D 30 2C 3330 0D 414243445F2073894EAE 414243445F2073894EAE41 4243445F2073894EAE Sent a message of 30 bytes in TCP 0: 414243445F2073894EAE 414243445F2073894EAE41 4243445F2073894EAE	After successfully sending the data,it will return bytes in ASCII: +ZIPSEND: 30 OK It will return a negative number after sending fails, Please refer to the appendix for the corresponding error code. +ZIPSEND: -102 Note:Operation would block
Defined values	<NUM>: The TCP socket number in ASCII <DATALEN>: The length of the massge in ASCII, values: <1, 1024> <MSG>: The message that is send	

2.7.11 +ZIPSENDU: Send Data Through UDP Channel

Description	This command is used to send data in UDP	
Syntax	AT+ZIPSENDU=<NUM>,<DATALEN> 0x0D <DATA>	

Demonstration	Hex command as follows: 61 74 2B 7A 69 70 73 65 6E 64 75 3D 30 2C 33300D 414243445F2073894EAE 414243445F2073894EAE41 4243445F2073894EAE Sent a message of 30 bytes in UDP 0: 414243445F2073894EAE 414243445F2073894EAE41 4243445F2073894EAE	After successfully sending the data, it will return bytes in ASCII: +ZIPSENDU:30 OK It will return negative after sending fail, Please refer to the appendix for the corresponding error code +ZIPSENDU: -102 Note: Destination address required
Defined values	<NUM> : The number of UDP socket in ASCII <DATALEN> : The length of the message in ASCII, values: <1, 1024> <DATA> : The message that is send	

2.7.12 +ZIPGETIP: Capture the IP address of module.

Description	This command is used to get the module IP address	
Syntax	AT+ZIPGETIP	
Demonstration	AT+ZIPGETIP	+ZIPGETIP:10.76.166.134 Note: Return the module IP address

2.7.13 +ZIPGETPORT: Capture the socket port number of module

Description	This command is used to capture the socket port number of module.	
Syntax	AT+ZIPGETPORT = <value1>,<value2>	
Demonstration	AT+ZIPGETPORT= 0,0	+ZIPGETPORT:32678 respond TCP protocol socket 0 port number
Defined values	<value1>: 0—TCP protocol; 1—UDP protocol. <value2>: socket number.	

2.7.14 +ZIPSTATUS: Inquire whether TCP socket is successfully connected

Description	This command is used to inquire whether TCP socket is successfully connected.
Syntax	AT+ZIPSTATUS=<NUM>

Demonstration	<p>AT+ZIPSTATUS=1</p> <p>Inquire the connection status between TCP socket 1 and the assigned port.</p>	<p>+ZIPSTATUS:ESTABLISHED OK Note: Successfully connect with the assigned port</p> <p>+ZIPSTATUS:SYN_SENT OK Note: Connecting</p> <p>+ZIPSTATUS:CLOSED OK Note: The connection is closed</p>
Defined values	<NUM>: The number of TCP socket, values: 0, 1, 2	

2.7.15 +ZPPREDIAL: Set the interval of redialing after dropped

Description	This command is used to set the interval of redialing after dropped	
Syntax	AT+ZPPREDIAL=<NUM>	
Demonstration	<p>AT+ZPPREDIAL=1</p> <p>Note: Set the interval to be 1×10 sec.</p> <p>AT+ZPPREDIAL=0</p> <p>Note: Set never redial</p>	<p>If the module has dialed successfully, then the redial function is enabled, otherwise, this command is disabled.</p> <p>Close the re-dial function while re-dialing, otherwise, this command is disabled.</p>
Defined values	<NUM>: Interval of redial by 10 sec. as units, values: <0,255>	

2.7.16 +ZPKEEPLIVE: Turn on/off the function of keeping alive

Description	This command is used to turn on/off the online function.	
Syntax	AT+ZPKEEPLIVE=<NUM>	
Demonstration	<p>AT+ZPKEEPLIVE=1</p> <p>Note: Turn on the online function</p> <p>AT+ZPKEEPLIVE=0</p> <p>Note: Turn off the online function</p>	<p>AT+ZPKEEPLIVE=1 OK</p> <p>AT+ZPKEEPLIVE=0 OK</p> <p>Note: Cancel the function successfully</p>
Defined values	<NUM>: Values is 1 or 0; 1 denotes keeping online, 0 denotes function is cancelled	

2.7.17 +VKLStatus: Turn on/off the function of Virtually Keep-Online

Description	This command is used to turn on/off the virtually keep-online function.	
Syntax	AT+VKLStatus=<NUM1> AT+VKLStatus=4,<NUM2>	
Demonstration	AT+ VKLStatus = 0 turn on the virtually keep-online function.	AT+ VKLStatus =0 +VKLStatus: OK Enter virtual online mode successfully AT+ VKLStatus =1 +VKLStatus: OK Enter really online mode Setting the timeout for entering really online mode:15s Fail to enter in 15s. + VKLStatus:4 inquire status + VKLStatus: 0 OK Module is in the virtual online mode
Defined values	AT+ VKLStatus =<NUM1> <NUM1> 0: virtual online mode 1: really online mode 2: always online mode 3: inquire the status 4: setting the timeout for entering virtual online mode AT+ VKLStatus =4,<NUM2> <NUM2>: 0~255, timeout for virtual online mode entry	
	The pamaters of status: + VKLStatus: <NUM> 0: virtue online mode 1: really online mode 2: always online mode 3: not online(ppp link is failed) 4: fail to enter really online mode	

2.7.18 +ZDORMANT: Enter dormant Mode forwardly

Demonstration	enter dormant mode forwardly	
Syntax	AT+ZDORMANT	
Demonstration	AT+ZDORMANT	OK +ZDORMANT: TRYING
Defined values	+ZDORMANT: <STATUS> TRYING: keep in touch with basestation, trying to enter dormant mode READY: enter dormant mode successfully CLOSE: quit dormant mode	

2.7.19 +CTA: set interval to enter dormant Mode

Demonstration	This command is used to set interval to enter dormant mode	
Syntax	AT+CTA	
Demonstration	AT+CTA=5 Note: set 5 seconds later to enter dormant mode after PPP connection has been established successfully	OK
	AT+CTA=0 Note: terminal never enter dormant mode	OK
Remark	There are 3 ways to enter dormant mode: order terminal to enter immediately through AT+ZDORMANT command, set interval to enter some seconds later through AT+CTA command, or BS releases traffic channel forwardly. CTA setting could be valid while it is configured before connecting PPP link.	

2.7.20 +ZSETCONNECT: Set how to respond “connect” during dial-up through Module’s

Exterior Protocol Stack

Demonstration	This command is used to set how to respond “connect” during dial-up through module’s exterior protocol stack	
Syntax	AT+ZSETCONNECT=<value1>	
Demonstration	AT+ZSETCONNECT = 0	OK
Defined values	<value1>: 0-- respond CONNECT while dialing; 1—respond CONNECT after accessing traffic channel successfully	
Remark	Default Value is 1.	

2.7.21 +ZIPOVERTIME: set or close send data's overtime

Demonstration	This command is used to set or close send data's overtime If set the function of sending data successfully, module will time for the datas sending from ZIPSEND, the module wil return -102, if it receives no data length during the setting time	
Syntax	AT+ ZIPOVERTIME =<NUM>	
Demonstration	AT+ ZIPOVERTIME =0 Close the function of sending data AT+ ZIPOVERTIME =1 Set the send data's overtime is 1 second : AT+ ZIPOVERTIME =0 OK Close the function of sending data successfully AT+ ZIPOVERTIME =1 OK Set the send data's overtime is 1 second successfully	
Defined values	<NUM>: 0: the function of sending data overtime 1: set send data overtime is 1 second 2: set send data overtime is 2 second 3: set send data overtime is 3 second 4: set send data overtime is 4 second	

2.7.22 +ZDNSGETIP: domain name resolution

Demonstration	This command is used to domain name resolution	
Syntax	AT+ ZDNSGETIP =<registered domain name>	
Demonstration	AT+ ZDNSGETIP=www.tianya.cn	+ZIP:218.77.130.151 return to the domain name's IP address +ZDNSGETIP: failed If the resolution is failed return "failed"
Defined values	Defined values are the domain name's string to be resolved.	

2.7.23 +ZDNSP: set first choose DNS server's IP address

Demonstration	This command is used to set first choose DNS server's IP address	
Syntax	AT+ ZDNSP =IP address strings	

Demonstration	AT+ ZDNSP= 220.192.32.103 AT+ ZDNSP?	set first choose DNS server's IP address OK query first choose DNS server's IP address 220.192.32.103 OK
Defined values	Defined values are DNS server's IP address strings	

2.7.24 + ZDNSS: set standby DNS server's IP address

Demonstration	This command is used to set standby DNS server's IP address	
Syntax	AT+ ZDNSS = IP address strings	
Demonstration	AT+ ZDNSS= 220.192.0.103 AT+ ZDNSS?	set standby DNS server's IP address OK query standby DNS server's IP address 220.192.0.103 OK
Defined values	Defined values are DNS server's IP address strings	

2.8 Indication list of TCP/IP affairs.

2.8.1 +ZIPRECV: Receive The Data From TCP Channel

Description	Return the data from TCP	
Syntax	+ZIPRECV: 0,<DATALEN><DATA>0x0D 0x0A	
Demonstration	Received message in Hex: 2B 5A 49 50 52 45 43 56 3A 20 30 2C 35 2C 12 00 12 00 34 0D 0A	2B 5A 49 50 52 45 43 56 3A denotes: +ZIPRECV: 20 denotes blank 30 denotes channel 0 in ASCII 2C denotes comma 35 denotes the length of the message in ASCII 2C denotes command 12 00 12 00 34 denotes the received message
Defined values	<DATALEN>: The length of received message in 1 byte <DATA>: Received message	

2.8.2 +ZIPRECVU: Receive The Data From UDP Channel

Description	Return the data from UDP	
Syntax	+ZIPRECVU: 0,<DATALEN><DATA>0x0D 0x0A	
Demonstration	Received message in hex: 2B 5A 49 50 52 45 43 56 55 3A 20 30 2C 35 2C 12 00 12 00 34 0D 0A	2B 5A 49 50 52 45 43 56 55 3A denotes:+ZIPRECVU: 20 denotes blank 30 denotes channel 0 in ASCII 2C denotes comma 35 denotes the length of the message in ASCII 2C denotes command 12 00 12 00 34 denotes the received message
Defined values	<DATALEN>: The length of received message in 1 byte <DATA>: Received message	

2.8.3 +ZPPPSTATUS: Indicate The Shift of Connection

Description	Return the shift of current connecting indication	
Syntax	+ ZPPPSTATUS: OPENED + ZPPPSTATUS: CLOSED	
Demonstration	+ZPPPSTATUS: OPENED	Note: Dial-up or Redial-up successfully
	+ZPPPSTATUS: CLOSED	Note: Failure dial-up or Disconnection (After disconnection, all of the TCP, UDP socket are disabled, you need dial-up again)

2.8.4 +ZTCPESTABLISHED: Indicate The Connection With TCP

Description	Return current number of the TCP which is successfully connected	
Syntax	+ ZTCPESTABLISHED: <SOCKET_NUM>	
Demonstration	+ ZTCPESTABLISHED:0	Note: Connect with channel 0
Defined values	<SOCKET_NUM>: The number of socket that is connected	

2.8.5 + ZTCPCLOSED: Indicate The Disconnection With TCP

Description	Return current number of TCP socket which is closed
--------------------	---

Syntax	+ ZTCPCLOSED: <SOCKET_NUM>	
Demonstration	+ ZTCPCLOSED:0	Note: Not connect with channel 0
Defined values	<SOCKET_NUM>: Number of socket	

2.9 Unsolicited AT Commands

2.9.1 +ZCED: Cell Environment Description Indication

Description	Check the environment of main cell and six neighbour cells. There are two return modes:1, return every 5 seconds automatically. 2, require return. Automatical return is not supported during communication and login period.	
Syntax	AT+ZCED=<mode>[,<requested dump>]	
Demonstration	AT+ZCED=0,1	+CCED:0,283,13844,13,6,249,10514,2,17,-62,-74,-63 OK
	AT+ZCED=0,2	+CCED:20,0,81,283,0,417,283,0,195,283,0,168,283,0,93,283,0,144,283,0,336,283,0,159,283,0,378,283,0,381,283,0,201,283,0,429,283,0,468,283,0,480,283,0,300,283,0,261,283,0,495,283,0,450,283,0,282,283,0,141,283 OK
	AT+ZCED=0,4	+CCED:0 OK
	AT+ZCED=0,8	+CSQ:31, 99 OK
	AT+ZCED=0,15	+CSQ:31, 99 +CCED:0,20,0,81,283,0,417,283,0,195,283,0,168,283,0,93,283,0,144,283,0,336,283,0,159,283,0,378,283,0,381,283,0,201,283,0,429,283,0,468,283,0,480,283,0,300,283,0,261,283,0,495,283,0,450,283,0,282,283,0,141,283,0,283,13844,13,6,249,10514,2,15,-64,-72,-63 OK
Defined values	<mode> 0: return only one time 1: return every 5s 2: stop return on every 5s <requested dump> 1: main cell: : band class, Channel #, SID, NID, Base Station P Rev,Pilot PN offset, Base Station ID,Slot cycle index, Raw Ec/Io, Rx power, Tx power, Tx Ad	

	<p>j</p> <p>2: neighbour cell1~20: the first parameter is counters of neighbour cell, and follows are: no.1 band; no.1 PN; no.1 channel; no.2 band; no.2 PN; no.2 channel.....</p> <p>4: Timing Advance: always is 0 in CDMA network</p> <p>8: main cell SSI from 0 to 30 return result and+CSQ command.</p> <p>15: return the signal and information of main cell</p>
--	--

2.9.2 +CCWA: Call Waiting Indication

Description	This unsolicited command indicates another incoming call is occurring during an existing call. See +ZFLSH, section 4.23 for information about handling call-waiting situations.
Syntax	+CCWA: <caller_id>, <type>
Demonstration	+CCWA: 18005551212,129 Note: Incoming call from 1-800-555-1212.

2.9.3 +CDS: SMS Status Report Indication Directly Displayed

Description	This command indicates an SMS status report has been received and, according to message storage preferences (+CNMI), is to be directly displayed.
Syntax	+CDS : <fo>,<mr>, [<ra>] , [<tora>], <scts>,<dt>,<st> (Text mode)
Demonstration	+CDS : 2, 116, "3146290800", 129, "98/10/01,12 :30 :07+04", "98/10/01 12 :30 :08+04", 0 Note: SMS status report received

2.9.4 +CLIP: Caller ID Presentation

Description	This unsolicited command indicates caller ID information is available for the current incoming call.
Syntax	+CLIP: <caller_id>, <type>
Demonstration	+CLIP: 18005551212,129 Note: Incoming call from 1-800-555-1212, type always equals 129.

2.9.5 +CMT: Incoming Message Directly Displayed

Description	This command indicates an incoming message has been received and, according to
--------------------	--

	o message storage preferences (+CNMI), is to be directly displayed.
Syntax	+CMT: <oa>,<scts>,<tooa>,<lang>,<encod>,<priority>[,<cbn>],<length><CR><LF><data> (text mode)
Demonstration	+CMT: "123456","98/10/01,12:3000+00",129,1,2,5,0,"5550000",5<CR><LF> Hello Note: Incoming message received

2.9.6 +CMTI: Incoming Message Stored in Memory

Description	This command indicates an incoming message has been received and, according to message storage preferences (+CNMI), is to be stored in memory.
Syntax	+CMTI: "MT",<index>
Demonstration	+CMTI: "MT",5 Note: Incoming message received and stored in "MT" memory at index 5

2.9.7 +CREG: Registration & Roaming

Description	This unsolicited command indicates the current state of roaming.	
Syntax	AT+CREG=<mode> +CREG :<mode>,<stat> return code	
Defined values	AT+CREG=0	+CREG:0,1 OK
	AT+CREG? Report the status of registration	+CREG: 0,1 OK
	AT+CREG=?	+CREG: (0-1) OK
	<mode> 0: forbid result code (default) 1: allow result code: +CREG:<stat> <stat> 0: not registered, MS is not currently searching for a new operator. 1: Registered, home network. 2: no registred, MS currently searching for a base station. 4: unknow code 5: registred,roaming	
Remark	Default Value is 0.	

2.9.8 +CRING: Incoming Call

Description	11.9.1 Description: This unsolicited command indicates an incoming call. See +CRC for information about enabling this result.	
Syntax	+CRING: <Type>	
Demonstration	+CRING:VOICE	for normal voice calls
	+CRING:DATA	for all types of data calls
	+CRING:FAX	for all types of fax calls
	+CRING:OTAPA	for OTAPA calls
	+CRING:TEST	for markov, loopback, and test calls
	+CRING:UNKNOWN	for unknown/undefined calls types

2.9.9 +CSQ: Automatic Signal Intensity Indication

Description	This command indicates RSSI automatic shots when AT+ZCED=1,8 is processed.
Syntax	+CSQ: <rss>,99
Demonstration	+CSQ:29, 99

2.9.10 +RING: Incoming Call

Description	This unsolicited command indicates an incoming call.
Syntax	+RING
Demonstration	+RING +RING Note: Incoming Call

2.9.11 +ZCANS: Call Answered

Description	This unsolicited command indicates a call/answer process, refer ATA,ATD for details.
Syntax	+ZCANS:<call type>
Demonstration	Module is called: +RING ATA OK +ZCANS:0 : Note: Incoming call answered +ZCCNT:3 Module is calling: ATD34394036; originate a call

	OK +ZCORG:34394036 call out +ZCCNT:0,3 succeed ZCANS: 1
Defined values	<call type> 0: incoming call 1: outgoing call answered by other party (only available on networks supporting answering supervision for payphone applications)

2.9.12 +ZCMP Pulse_count signal indication

Description	This command provides the condition of Pulse_counter.
Syntax	+ZCMP:<freq>, <on_time>, <off_time>, <pulse_count> <cr><lf>
Demonstration	+ZCMP:100, 10, 20, 10
Defined values	+ZCMP: <freq> : pulse frequency (factual frequency should multiply 10Hz) 0~65535 <on_time> : pulse time (factual time should multiply *5ms) 0~255 <off_time> : pulse interval time (factual time should multiply *5ms) 0~255 <pulse_count> : pulse record 0~255

2.9.13 +ZCCNT: Call Connected

Description	This unsolicited command indicates that an incoming or outgoing voice call has been connected into a traffic channel state.	
Syntax	+ZCCNT: <so>	
Demonstration	ATD18005551212; 	OK +ZCORG:18005551212 +ZCCNT:3 Note: Call Connected with service option 3
Defined values	<call_type>: 0 (voice call), 3 (SMS), 20 (data service) <srv_opt>: 1, 3, 0x8000 (voice call) 6, 0xE (SMS) 0x21 (data service)	

2.9.14 +ZCEND: Call Ended

Description	This unsolicited command indicates that a voice call or attempt to establish a voice call has ended.	
Syntax	+ZCEND: <reason>	
Demonstration	ATD18005551212;	OK +ZCORG:18005551212 +ZCCNT:3 OK +ZCEND:25
	ATH ATD18005551212;	OK +ZCORG:18005551212 +ZCEND:23 呼叫结束
Defined values	<reason> 0: Phone is offline 20: Phone is CDMA locked 21: Phone has no service 22: Call end 23: Received Intercept from Base Station 24: Received reorder from Base Station 25: Received a release from Base Station 26: Service option rejected by Base Station 27: Received Incoming Call 28: Received an alert stop from Base Station 29: Software ended the call (Normal release). 30: Received end activation – OTASP calls only. 31: Internal software aborted the origination/call. 34: RUIM not present 99: NDSS failure 157: connection setup timeout	

2.9.15 +ZFLSH: Flash indication

Description	This unsolicited command confirms that a flash has been sent to the base station.	
Syntax	+ZFLSH	
Demonstration	AT+ZFLSH	OK +ZFLSH

2.9.16 +ZIND: General Indicator

Description	This unsolicited result gives general status indications.	
Syntax	+ZIND: <event>	

Demonstration	+ZIND:8 Note: General indication that AT commands are ready to be acceded
Defined values	<event> 0: R-UIM not present 1: R-UIM present 2: Reserved 4: Reserved 8: Product is ready to process all AT commands 16: Reserved 32: Reserved 64: The network service is available for an emergency call. 128: The network is lost. 256: Reserved 512: Reserved
Remark	Default Value is 9.

2.9.17 +ZCORG: Call Originated

Description	This unsolicited command indicates that an attempt to establish a voice call has occurred.	
Syntax	+ZCORG:<number>	
Demonstration	ATD18005551212;	OK +ZCORG:18005551212 +ZCCNT:3 OK
Defined values	<number> phone number	

2.9.18 +ZCVPR: Call Privacy indication

Description	This unsolicited command confirms that the call privacy level has changed during a call.	
Syntax	+ZCVPR: <prv>	
Demonstration	AT+ZCVPR=1	OK +ZCVPR: 1
Defined values	<prv> 0: Indicates normal privacy 1: Indicates enhanced privacy	

2.9.19 +ZCROAM: Roaming Indication

Description	This unsolicited command indicated roaming status has changed.
Syntax	+ZCROAM: <roam>
Demonstration	+ZCROAM:1
Defined values	<roam> 0: Home. 1: Roam Icon on (affiliated network) 2: Roam Icon blink (foreign network)

2.9.20 +ZNAM: NAM Change Indicator

Description	Indicator if NAM changed. Currently module only support one NAM.
Syntax	+ZNAM: <nam>
Demonstration	+ZNAM:1
Defined values	<nam> 1: NAM 1 2: NAM 2 3: NAM 3 4: NAM 4

2.9.21 +ZMGF: SMS Message Storage Full

Description	This command indicates that the SMS Service Center has attempted to send an SMS message but it was rejected because SMS Message Storage is Full. No new SMS will be received until some room is created by deleting old messages from SMS storage. Message deletion can be done using AT+CMGD.
Syntax	+ZMGF
Demonstration	+ZMGF Note: Incoming message rejected.

2.10 Return parameters

2.10.1 Report code of AT command

Verbose result code	Numeric (V0 set)	Description
+CME ERROR: <err>	as verbose	Error from GSM 07.05 commands
+CMS ERROR: <err>	as verbose	Error from GSM 07.07 commands
BUSY	7	Busy signal detected
ERROR	4	Command not accepted
NO ANSWER	8	Connection completion timeout
NO CARRIER	3	Connection terminated

OK	0	Acknowledges correct execution of a command line
RING	2	Incoming call signal
CONNET	1	Network connection

2.10.2 Error report result : +CME ERROR: <error>

<error>	meaning	Resulting from the following commands
3	Operation not allowed	All GSM 07.07 commands (+CME ERROR: 3)
4	Operation not supported	All GSM 07.07 commands (+CME ERROR: 4)
5	PH-SIM PIN required (SIM lock)	All GSM 07.07 commands (+CME ERROR:5)
10	UIM not inserted	+CPIN
11	UIM PIN1 required	+CPIN
12	UIM PUK1 required	+CPIN ,+CPIN2
13	UIM failure	+CPIN, +CPIN2
14-15	Reserved	
16	UIM wrong password	+CPIN, +CPIN2
17	UIM PIN2 required	+CPIN, +CPIN2
18	UIM PUK2 required	+CPIN, +CPIN2
20	Phone Book full	+CPBF, +CPBW
21	Invalid Index for Phone Book	+CPBF
22	Phone Book entry not found	+CPBF, +CPBP
23-39	Reserved	
40	Network personalization (Network lock) PIN required	All GSM 07.07 commands (+CME ERROR: 40)
41	Software resource not available	+ZCVPR, +CICB, +ZFLSH, +CCFC, +ZNAM, +COPS, +ZRMP
42	Invalid parameter	All commands
43	Non-Volatile Memory failure	All commands
44	Invalid WPIN code or WPIN Required	All commands except ATD
45	Invalid WSPC provisioning code	+ZSPC, +ZMDN, +ZIMI, +ZSID, +ZAOC, +ZSCI, +ZBGP, +ZBGS, +ZPDS, +ZCMT
46	OTKSL provisioning code access restricted	+ZMDN, +ZSCI, +ZBGP, +ZBGS, +ZPDS

2.10.3 Message service failure result code: +CMS ERROR : <er>

<er>	meaning	Resulting from the following commands
1 to 127	Reserved	
301	Reserved	
302	Operation not allowed	All SMS commands
303	Reserved	
304	Invalid mode parameter	+CMGS,+CMGW
305	Invalid text mode parameter	+CMGS,+CMGW,+CMSS
310-318	Reserved	
321	Invalid memory index	+CMGR,+CMGD,+CMSS
322	Reserved	
330	Reserved	
340	No +CNMA acknowledgement expected	+CNMA
341	Non Volatile Memory failure	All SMS commands

2.10.4 Extended Error Report (+CEER) Call Processing codes

Cause value	Diagnostic
0	No error detected in call processing
1	No CDMA service detected
2	Module is in a call, operation not allowed
3	Module is not in a call, operation not allowed
4	Module is in an unknown call state
5	Call Barring is ON
6	Invalid or Not allowed CDMA Service Option
7	Invalid Parameter
8	Operation only allowed during an incoming call
9	Invalid Mode Selection
10	Invalid Roam Selection
11	Invalid Band Selection

2.10.5 Parameters Storage

Command	AT&W	E2save	AT&F	Default Values
General commands				
+CSCS	X		X	CDMA
+CMEE	X		X	0
+CRSL			X	1

Call control commands				
&D	X		X	0
ATS0	X		X	0 no auto answer
+CICB	X		X	2
+VGR	X		X	3
+VGT	X		X	2
+SPEAKE R	X		X	1
+ECHO		X	X	5
+SIDET	X		X	
Network commands				
+COPS		x(n.0 m)	X	0,0
+CREG	X		X	0
SMS commands				
+CSDH	X		X	0
+ZMSGU			x	0
Supplementary service commands				
+CLIP	X		X	1
Data commands				
+CRC	X		x	0
+DS	X		x	
+DR	X		x	0
Fax class 2 commands				
+FCQ	X		X	
+FCR	X		X	
+IPR		X		115200
+ICF	X			3,3
+IFC	X			2,2
V24-V25 commands

&C	X			2
&D	X			2
Phonebook				
ZAIP	X			1

2.10.6 Possible codes for SMS-STATUS-REPORT as reported by +CDS and +CMGR

<st>	Description
Network Problems (IS-41D)	

0	Address vacant
1	Address translation failure
2	Network resource shortage
3	Network failure
4	Invalid Teleservice id
5	Other Network Problem
Terminal Problems	
32	No page response
33	Destination busy
34	No acknowledgment
35	Destination resource shortage
36	SMS delivery postponed
37	Destination out of resources
38	Destination no longer at this address
39	Other terminal problem
Radio Interface Problems (IS-41D)	
64	Radio IF resource shortage
65	Radio IF incompatible
66	Other Radio IF problem
General problems (IS-41D)	
96	Unexpected parameter size
97	SMS Origination denied
98	SMS Termination denied
99	Supplementary service not supported
100	SMS not supported
101	Reserved
102	Missing expected parameters
103	Missing mandatory parameters
104	Unrecognized parameter value
105	Unexpected parameter value
106	User data size error
107	Other General problems
General codes (Not defined in IS-41D)	
32768	SMS OK. Message successfully delivered to base station
32769	Waiting for transport layer acknowledgment
32770	Out of resources (e.g. out of memory buffer)
32771	Message too large to be sent over access channel
32772	Message too large to be sent over data traffic channel
32773	Network not ready
32774	Phone not ready
32775	Cannot send message in analog mode

32776	Cannot send broadcast message
32777	Invalid transaction id

3 Applications and cautions

3.1 First time to supply power

You must supply power to module earlier than RS-232 interface, or it will cause power supply errors to module. Normally, it will return “ZIND 8” automatically after supplying power, which indicates the COM link is OK. If RS-232 interface do not respond after supplying power, you need to check the baud rate is right or not(default value:115200). On the other hand, you can observe whether the LED indicator on development board winks or you can monitor whether circuit level is modified on corresponding pin. Please contact our technical support engineers if you got problems.。

Second, you’d better query signal intensity through AT+CSQ, then dial a telephone number to test whether the connection is available. It demonstrates hardware is workable if succeed.

After that, you can configure basic settings of module as your requirement.

+ZIND:8 ——COM is OK

+ZIND:1 ——detects UIM card

 ——input “at+csq? “, at that time the command is invisible as default so the input command do not display.

+CSQ: 31, 99 ——returns signal intensity
OK

 ——input”ate1” to enable command display

OK ——operation is successful.

ate1 ——input “ate1” once again, you can see inputed command on the screen.

OK

at+csq? ——input “at+csq? “ again and you can see inputed command on the screen.

+CSQ: 23, 99 ——returns signal intensity
OK

3.2 Power off and reset

Attention: we mightily suggest customers switch off modules normally but not cut down the power supply. Exceptional power supply breaking will bring irredeemable damages to module and UIM card, which must be returned to factory to fix.

Please refer hardware documents of module for powering off and resetting details

Attention: modules will restart after powering off if there is input voltage on VCHG. Users can reset module through powering off command(AT+ZPWOFF) and resetting command(AT+CFUN=1), whose effects are the same.

3.3 Originate a call

atd86360XXXX; --dial a number, notice: there must be “; “ behind the numbers
 OK
 +ZCORG:86360XXXX ——indicates module is originating a call
 +ZCCNT:0,3 ——indicates call succeed, destination phone is ringing.
 +ZCEND:25 ——destination phone hangs off

3.4 Incoming call

+CLIP:"075586360XXXX",129 ——indicates an incoming call, 129 means the number is domestic
 RING:075586360XXXX ——module is ringing.
 RING:075586360XXXX
 RING:075586360XXXX
 Ata ——answer the call
 OK
 +ZCANS:0 ——call type, 0 means voice call.
 +ZCCNT:0,3 ——connected
 ath ——module hangs off
 OK
 +ZCEND:29 ——29 means module hangs off

3.5 Call Forwarding Setting

Call forwarding number is provided by the operator. Take Guangdong Unicom for example, the forwarding object number is 13088888888. Set as below:

ATD*90 13088888888; set forwarding on busy
 ATD*730; cancel forwarding on busy
 ATD*92 13088888888; set forwarding on no reply
 ATD*730; cancel forwarding on no reply
 ATD*68 13088888888; set forwarding on busy/no reply
 ATD*730; cancel forwarding on busy/no reply
 ATD*72 13088888888; set forwarding unconditional
 ATD*720; cancel forwarding unconditional

Note: for different operators, the setting method might be different. Please consult local operator.
 SMS

3.6 TCP/IP protocol stack

First of all, users must enable data service and get ID and password from operator. If you want to use data and

voice call service at the same time, call forwarding service must be enabled. For example, under China Unicom network, the number is #777, ID and username both are card. A simple test way is dial-up to confirm whether link can be done successfully.

Network link could be divided into 2 layers logically: data link layer (PPP protocol), transmission layer (TCP/IP protocol). Data transmission channel from module to BS can be established by PPP link, carrying maximum 3 TCP/IP link. The way operator calculate cost is according to bits flow or time.

Module can packet IP datagrams with PPP format automatically, so TCP/IP transmission is slower than PPP by comparing COM data rate. But this comparison is not suitable, you should compare them with the same datagram, and calculate data rate with PPP datagrams on lowest layer.

At last, please make sure PPP link has been established before TCP/IP link, and close PPP link after TCP/IP link.

Examples:

Supposing it need to send a 1k size datagram per X minutes

-----network link-----

at+znnum=#777 ---setup service number
OK

at+znidpwd=card,card ---setup ID,password
OK

at+znppstatus ---inquire current PPP link status
+ZPPPSTATUS: CLOSED ---close
OK

at+znppopen ---open PPP link
+ZPPPOPEN: ---processing request
OK

+ZPPPSTATUS: OPENED ---PPP link is open

3.7 SMS

at+cnmi=2,2,1,1,0 ——set new SMS indication as “display directly without save”
 OK

+ZCANS:3

+ZCCNT:3,14

+CMT:"13360504647","07/08/02,03:02:00",129,1,2,0,5

ztemt ——received a new message. "13360504647" is the MO number, "07/08/02,03:02:00" is the sending time, and “ztemt” is the stuff

+ZCEND:25

at+cpms="mt" ——select “MT” as SMS storage. We can observe that there is no message in “MT” storage currently.

+CPMS: "MT",0,30,"MO",0,30

OK

at+cnmi=2,1,1,1,0 ——set new SMS indication as “save without display”
 OK

+ZCANS:3

+ZCCNT:3,14

+CMTI: "MT",0

——received a new message. save without display. From the indication of +CMTI, we can know that it was stored at index 0 in “MT” storage

+ZCEND:25

at+cpms?

+CPMS: "MT",1,30,"MO",0,30

——inquire current storage. From the indication of +CPMS, we can observe that there is one message in “MT” storage, which is we just received.

OK

at+cmgr=0

+CMGR: "REC UNREAD","13360504647","07/08/02,03:13:09",0,2,0

module ——read this message with index number. “REC UNREAD” is the

status of it, "13360504647" is the MO number, "07/08/02,03:13:09" is the sending time, "module" is the stuff.

OK

at+zmsgl=1,2

——set SMS language as English, encode way as ASCII

OK

at+cmgs="13360504647"

hello

+CMGS:1

OK

+CDS: 2,1,"13360504647",129,"07/08/02,11:28:40","07/08/02,11:28:45",32768

——send a message. "13360504647" is the MT number, "hello" is the stuff.

It will display +CDS as SMS sending status report while message sending is successful

at+cpms="mo"

+CPMS: "MO",0,30,"MO",0,30

——select "MO" as SMS storage. From returned information +CPMS, we can observe that there isn't message in "MT" storage.

OK

at+cmgw="13360504647"

——write new message into "MO" storage. "13360504647" is the MT number, "goodbye" is the stuff. From returned information +CMGW, we can observe that this message was stored at index 0

goodbye

+CMGW: 0

OK

at+cpms?

+CPMS: "MO",1,30,"MO",1,30

——inquire current storage. From the indication of +CPMS, we can know that there is one message in "MO" storage, which is we just wrote.

OK

at+cmgr=0

+CMGR: "REC UNSENT","13360504647","07/08/02,13:50:14",0,2,0

Goodbye

——read this message with index number. From returned information +CMGR, we can know that current status of it is "REC UNSENT"

OK

at+cmss=0
+CMSS: 1

OK
+CDS: 2,1,"13360504647",129,"07/08/02,13:57:55","07/08/02,13:57:58",32768
——send this stored message. While SMS sending is successful, it will return status report +CDS

at+cmgr=0
+CMGR: "REC SENT","13360504647","07/08/02,13:50:14",0,2,0
Goodbye ——read this message with index number. From returned information +CMGR, we can know that current status of it has been changed from “REC UNSENT” to “REC SENT”

OK

3.8 Phonebook

at+zaip=0 ——enable phonebook operation
OK

at+cpbs="me" ——select”ME”as phonebook storage
OK

at+cpbs?
+CPBS: ME, 0, 100 ——inquire current storage. From indication of +CPMS, we can know that “ME” storage is vacant.
OK

at+cpbw=0,"13360504647",145, ——write a contact number into”ME”storage. “0”means searching blank item to save automatically. "13360504647" is the contact number, “145” is the number type, “ztemt” is the contact name. From returned information +CPBW, we can know that this record was stored at index 1 in current storage”ME”

ztemt
+CPBW:1
OK

at+cpbr=1
+CPBR:1,"13360504647",145,"ztemt" ——read this phonebook record
OK

atd>1; ——originate a call with index number from current phonebook

memory. Call process was terminated by the other side.

OK

+ZCORG:13360504647

+ZCCNT:0,3

+ZCEND:25

atd>"ztemt";

——originate a call with contact name from current phonebook memory.

OK

+ZCORG:13360504647

+ZCCNT:0,3

ath

——terminate a call forwardly through ATH command

OK

+ZCEND:29

3.9 Parameters

Command buffer (TBD)

Data buffer (TBD)

3.10 Default settings

Referring detailed AT command, you will know leave factory settings.

Several important settings:

Serial port setting: 8 bit data, 1 bit stop, non-checksum bit, hardware flow control, data rate is 115200bps
